## **What do I think the word 'Interdisciplinary' means?**

The word interdisciplinary can mean something different to each individual. There are a variety of definitions when you think about it. When I hear the word Interdisciplinary, I immediately think about the multiple disciplines of study. It involves two or more fields of study or academic disciplines. This can mean combining two or more professions, departments, businesses, or courses.

I hear the term Interdisciplinary the most when talking about Interdisciplinary Studies. This simply means learning from two or more areas of study. For example, students will be able to think analytically and creatively when given a problem because they are learning in different ways. Studying various academic disciplines will benefit one later on in life. Instead of just understanding math problems, Interdisciplinary majors will have a broad perspective of each aspect they are learning.

I believe the term Interdisciplinary is very interesting when you dive in to learn about it. Exploring multiple perspectives from different disciplines can be very rewarding. Learning about the business side of things and then moving on to see the science part of it to the history and social side is interesting.

Overall, Interdisciplinary is a very broad term but involves looking at different areas of study in different perspectives. This enables one to learn more and think in a variety of ways. This will benefit people in their careers, social life, and in their daily routines. Being able to think critically about a situation can go a long way.
