**NOTES:**

STP located about 2 meters west from flagged location. During screening, soil is wet & as hole dug gets deeper more wet soil comes to surface, and the lighter the soil was at 50 cm in. Possible shell fragment found while screening around 50 cm deep. 64 cm deep soil color changed to a more orange hue. 70 cm in digging we've reached black colored soil, almost "Clay like", very ~~moist~~ moist & compacted. At 102 cm soil is super wet & too thick to screen. Water table NOT hit, stopping here. After measuring zones, ED → water seeped into bottom of hole.

\*STP located @ flagged area - E.D.

• Dry soil, dark gray in color at the very top

• a lot of roots and organic material  
• small bits of white shell found near top

• soil turns a lighter gray at 41 cm

• Charcoal found at 41 cm

• sandy color soil change at 56 cm

• thicker clumps of orange sand

• Dug Pit until 100 cm

• Charcoal found at 102 cm

• small white shells found more frequently at 105 cm,  
but could possibly be from top soil falling in.

• possible debitage at 108 cm - about 4 pieces  
of white, shell-like strips

Soil starting out grayish, moderate-heavy root inclusions, needed to stop around ~40cm to offset hole because of large root. Soil continues changing as we dig deeper, becoming lighter brown. No artifacts founds but shell was present near top layer of soil. Charcoal bits found throughout but in small amounts. Ended STP at 100cm.
