Enumeration and Bit-encoded Values for use with
IEEE 1278.1-1994, Standard for
Distributed Interactive Simulation--Application Protocols

Introduction

This 1994 revision of what is popularly called "the DIS enumeration document" has been prepared by the Institute for Simulation and Training (IST). The original contents of this document began as a set of separate appendices to the early versions of the Standard for Distributed Interactive Simulation (DIS) Protocol Data Units (PDUs). These appendices were eventually bound together under common cover with a single title and published as IST-CR-93-19. Stewardship of this document was then temporarily transferred to the Joint Interoperability Engineering Organization (JIEO), which substantially increased the level and amount of detail. This latest revision by IST retains the many substantive contributions of JIEO, while restructuring the document for the first time as the single, integrated source for all enumeration fields found in the DIS PDUs.

1.0 Overview

This document specifies the numerical values and associated definitions for those DIS PDU fields which are identified as enumerations in IEEE 1278.1-1994. Compliance with this document is mandatory for participation in a DIS exercise.

The various fields are grouped according to the PDUs in which they appear, and the PDUs are then grouped by PDU family, constituting Sections 3-9 below.

4.2.3 Comprehensive Entity-Type tables

The following tables list the correct field values of the Entity-Type record for many specific entities in a typical DIS exercise. The header on each page contains the Kind-, Domain-, and Country-field values for all entities on that page, as specified in 4.2.1. The remaining field values (Category, Subcategory, Specific) are nested in numerical order (with occasional exceptions due to correction or update) with specific definitions appropriate to the entity's kind, domain, and country. Field values for exercise-unique entities not found in these tables may be coordinated and specified *ad hoc*. Any unused field shall be zero-filled.

4.7.2.1 Example #1

To represent the articulation of a tank gun, azimuth of the turret is required as well as the elevation of the gun. This represents two articulated parts. The turret is attached to the tank. It has ID - Part Attached to = 0 because it is attached directly to the tank. We wish to dead reckon the position of the turret, so we require two articulation parameters for the turret: the azimuth and the azimuth rate. Azimuth will be articulation parameter #1 and azimuth rate will be articulation parameter #2. The gun is attached to the turret. It has ID - Part Attached to = 1 because it is attached to the turret. The gun has one articulation parameter, namely the elevation of the gun. Elevation will be articulation parameter #3.

For the turret, parameter #1 is the azimuth. The value to represent this is 4107: 4096 (primary turret) + 11 (azimuth of that turret). Parameter #2 is the azimuth rate. The value to represent this is 4108: 4096 + 12 (azimuth rate). For the gun, parameter #1 is elevation. The value to represent this is 4429: 4416 (primary gun) + 13 (elevation).

Suppose the turret is slewed but the elevation is unchanged. Then the three Articulation Parameter records would be:

Change indicator:	(value increment to indicate a change)
ID - Part Attached to:	0 (tank)
Parameter #1 type:	4107
Parameter value:	(an angle in radian)
Change indicator:	(value increment to indicate a change)
ID - Part Attached to:	0 (tank)
Parameter #2 type:	4108
Parameter value:	(rate in radian/sec)
Change indicator:	(value unchanged to indicate no change)
ID - Part Attached to:	1 (turret)
Parameter #1 type:	4213
Parameter value:	(zero)

4.7.2.2 Example #2

To represent an air-to-surface missile on an aircraft it is necessary to specify the station to which the missile is attached and the type of missile. For example, for a missile on the first left-wing station, the parameter type would be 0640. (The Parameter-Value field would indicate the type of munition attached to that station.) The Articulation Parameter record would then appear as:

Section 4
Entity State PDU

Change indicator:	(value unchanged to indicate no change)
ID - Part Attached to:	0 (aircraft)
Parameter #1 type:	0640
Parameter value:	(type of missile from 64-bit munition type)

If the missile was fired, the next Entity State PDU would have an Articulation Parameter record with the following information on the launched missile:

Change indicator:	(value increment to indicate a change)
ID - Part Attached to:	0 (aircraft)
Parameter #1 type:	0640
Parameter value:	(type of missile from 64-bit munition type)

The change indicator specifies that the munition that was present is no longer present.
