Author talks Tupperware
WESH's Kealing discusses new novel
BRITTNI JOHNSON
Corresponding Writer

WESH News Journalist and author Bob Kealing spoke to a group Thursday at the UCF Library to talk about his book, "Tupperware: Unsealed".

Kealing, who is also the author of the novel, "Flamingo Rage", spent time at the library to discuss his new book and the process of writing a novel.

"It's a lot of work," Kealing said. "I wrote the book over the course of a year and a half and it's been a long process." He explained the amount of research and work that goes into writing a novel.

Kealing's book "Tupperware: Unsealed" tells the story of how Tupperware, a home product, became a billion-dollar industry.

"It's a great story," Kealing said. "Tupperware is a story about innovation and entrepreneurship." He discussed the company's history and success, as well as the challenges it faced along the way.

"It's a great read," Kealing concluded. "I think people will enjoy reading about the history of Tupperware." He encouraged everyone to check out his book and read more about the story of Tupperware.

The University of Central Florida
participated in the Heart Walk for the past seven years, and we’ve raised nearly $80,000 for the American Heart Association through its fight against cardiovascular disease and stroke,” said President Hirn in an online streaming video.

UCF’s new goal: more than 700 companies in fundraising, according to the Greater Orlando Heart Walk Web site. Money is still being raised after the Heart Walk is over however.

In its eighth year so far for the walk, Loch Haven Park was filled with participants of all ages. Some even included their dogs in the walk. There was an array of support through colored team shirts and red baseball caps signifying survivors of heart disease and stroke.

Rob Amann, a survivor and intern director for Strategic Planning, sported the red baseball cap and was joined by his wife Julia Pet-Ammann, a plate donor of knowledge and management. It was their second year participating with the College of Medicine. “I feel great and it’s important to have a regular exercise,” the Amanns added.

Darlene J. Beatty, administration assistant for the Center for Data-Base Learning and part of the UCF team, said the increase in participants is a positive one.

“It’s fabulous. People are turning out more and more each year,” Beatty said. “More people are giving back, I think because more people are aware of the disease. The American Heart Association are doing a great job with getting the word out about heart disease.

Another survivor, Robin Roberts, Director of the School of Accounting and Burnett Eminent Scholar with her wife, walked with the College of Education, Student team.

Roberts was always aware of heart disease in his family and always lived a healthy lifestyle, but he would eventually have to undergo some form of treatment for his heart. That day came when he started feeling symptoms and

Conference on green lifestyle will come to UCF

JESSICA WIND

UCF will host the third annual Campus and Community Sustainability Conference Oct. 3 through the 8. The conference will offer information on the best ways to live a green lifestyle and promote green culture.

The theme of the conference is "The 3 C's of Sustainability: Communication, Community, and Campus Environment." More than 400 leaders from government agencies, universities and businesses are expected at the conference.

Many of these individuals are also sustainability practitioners and will present new and innovative projects that address environmental and social concerns.

Michelle Murphy of Campus Outreach and Programming for Sustainability and Campus Environment said, "The conference will help educate the community on sustainable initiatives under way at UCF, while helping the Sustainability Alliance understand the goals that still need to be set." Both the faculty and student sustainability alliances at UCF work to put forth green initiatives on campus as well as in the community.

The mission of the alliances, according to their Web site, is to incorporate the ecological, economic and social responsibilities of justice, economic development and environmental protection when formulating sustainable strategies for construction, operations and maintenance, education and research programs at the university.

"The Sustainability Alliance came from a need for everyone to open up lines of communication in order to unite the UCF's commitment to reducing its impact on the environment," Murphy said. "The conference is two days long, and will include presentations and workshops. The event will be held at the C. C. Laidlaw Center for a Sustainable Florida, and is coming to Orlando after originally being at University of Florida and then at Florida State University. Registration is open to the public, and the alliance has resolved to keep costs low for students, $59 for government agencies and universities and $99 for the private sector. Reduced and waived registration fees are available for those who qualify.

Anyone can register through the Web site at www.sustainablefloridaconference.org.

The Sustainability Alliance came from a need for everyone to open up lines of communication in order to unite the UCF's commitment to reducing its impact on the environment."

Students can have their economic development and educational interests addressed when formulating sustainable strategies for construction, operations and maintenance, education and research programs at the university.

Carson Williams collapsed midway through the third quarter of the University of Florida's game against Monmouth. The head coach and his top assistant were both on the bench. The university was robbed of its star and the 6-foot-3, 220-pound forward who had been expected to lead the team to a national title. The team, which had been ranked among the top-10 in the country, was left without its most important player on the court. The game was tied 32-32 with 12 minutes left to play when Williams was sent to the floor with what appeared to be an injury. He was immediately taken to the locker room and later ruled out for the remainder of the season.

Real estate leader speaks at UCF

Terry Delahunty, head representative of the National Association of Real Estate Academic Leaders, shared his experience as a real estate leader with students at the University of Central Florida (UCF).

Delahunty stressed the importance of networking and building relationships within the real estate industry. He encouraged students to get involved in real estate clubs and organizations, such as the Real Estate Club at UCF, to meet people and make connections that can help in the future.

Delahunty also discussed the importance of obtaining practical experience through internships and hands-on projects. He highlighted the role of the National Association of Real Estate Academic Leaders in providing case studies and other resources to help students prepare for careers in real estate.

In addition, Delahunty addressed the challenges that arise from working in real estate, such as the need for strong communication skills and the importance of understanding regulations and laws. He emphasized the need for students to develop a project or business plan during their time at UCF.

Delahunty's speech concluded with a call to action for students to be proactive in their careers and to take advantage of opportunities to learn and grow within the real estate industry.
thought he might get some useful conversation starters for the future. "It took me a while to get some common ground with any more," Lipp said.

But what Lipp said was most interesting to him was that "the door for thousands of women to work at home in a social setting. This opened a whole new world of possibilities." Cox said. "She was a trailblazer," said Cox. "She was a leading woman at a major corporation which should be motivational to all, not just women." But this "rock star" of Tupperware has not been recognized for her accomplishments. Tupper has submittedWisefor induction into the Florida Women's Hall of Fame for two years in a row, but she hasn't made the shortlist. Tupper hopes his book will help bring attention to Wise's contributions to the lives of women.

"The determination to be celebrated," he said. "She is the most important Florida business woman of the 21st Century."

BC LETSDOWN

Women's soccer loses first home game since '06

William Perry

The UCF Women's Soccer team fell to No. 23 Kansas on Friday night in a 3-2 thriller that saw the Knights come within striking distance before ultimately losing 3-2.

In their first road game of the season, the Knights collapsed after leading 7-3 at the half. Here's a breakdown of what happened:

**The Breakdown**

**Quarterback play leaves much to be desired**

**PARDOCE BREWER**

Aside from a graphic on ESPNU indicating that Ricky Ross is wide receiver for the Knights, there was not much to smile about for the UCF Football team Saturday in Chestnut Hill, Mass.

Even with the big-step up in the Bronx, UCF would have had trouble dealing with Boston College, which outscored the Knights 36-0 in the second half on route to a 34-7 victory.

In their first road game of the season, the Knights collapsed after leading 7-3 at the half. Here's a breakdown of what happened:

UCF QB Michael Greco vs. Boston College backup Chris Crane

In a game with two very similar legs, whichever team had the best pass from quarterback was going to win. Both starting quarterbacks played well enough to get bunched in the first half, with Boston College backup Dominique Davis entering in the Eagles’ third series of the game and UCF true freshman Bob Calabrese making his first appearance with the Knights with about 12 minutes remaining in the second quarter.

Before he was taken out, Greco was 4-of-8 for 35 yards and a interception. Calabrese, entering his first action of the season, threw an interception on his first collegiate pass attempt.

UCF misses chances in mistake-filled game at BC

Brian Murphy

CHESTNUT HILL, Mass. — It was a beautiful Saturday for football on the campus of Boston College. The weather was crisp, the sky was bright and blue and full was felt in the air.

But for the UCF Football team Saturday, the weather was not on their side. The Knights came out attacking, and the game we love and we fall for football on the campus of Boston College. The weather was crisp, the sky was bright and the Knights fell to No. 21 Kansas on Friday night in a 3-2 thriller that saw the Knights come within striking distance before ultimately losing 3-2.

After seeing their goal go in early scoring chance on a corner kick directed a shot past Kansas goalie Julie Hanley. Kansas’ Shannon McCabe tried several more long shots, but all were blocked. Kansas picked up its offensive pressure and tied the score in the 30th minute when Katie Williams redirected a shot past UCF goalie Alten Reul.

Defensive errors lead to late goal for the Jayhawks

The Jayhawks narrowly avoided giving up the tying goal. They came up short and lost 2-1 at home since 2006, when they lost 2-1 to the Memphis Lady Tigers. The loss made a step in the right direction. They had a season-high 22 offensive possessions.

Becca Thomas was chosen to cap the ball into the net to even the score. She moved toward the goal and sent it sailing over the net. Then with 2 minutes remaining, Kansas delivered the late heartbreaker. Williams sent a rainbow from relented to the left of the box. Emily Cressy picked it up and scored a winner into the right corner of the net to give her team a much-needed go-ahead goal on her tournament-filling fifth of the year.

The Jayhawks were down but

Historic bailouts leave banks on the hook

In recent weeks, newspapers have carried on a nationwide debate about what, if anything, should be done to help homeowners who are having trouble paying their mortgages. Many commentators seem to find a rock bottom and equilibrium in these numbers, right and left saying that the government has to act one way or the other to address the problem. But there is an entirely different way of looking at the current situation. When we agree that the government is going to bail out Fannie Mae and Freddie Mac, we are essentially giving our financial services giant a full-time job. All of the nation’s financial assets will now be under the care of these two new feuding millionaires. If they fail, the taxpayer will lose billions. If they succeed, the taxpayer will gain billions. But how do we determine if they succeed or fail? And more importantly, who is going to make these decisions?

The answer to these questions seems to be found in the field of economics. Keynesian economics, the school of thought that dominated the world’s financial markets for much of this century, is now being challenged by a new and very exciting field of thought: behavioral economics. The basic premise of behavioral economics is that our financial decisions are not made by rational, self-interested individuals, but rather by individuals who are influenced by emotions, biases, and social norms. In other words, our financial decisions are not made by the “rational man” model, but rather by the “irrational man” model.

This is not to say that behavioral economics is without its critics. Some argue that the field is too complex and too uncertain to be taken seriously. Others argue that the field is too focused on individual behavior and not focused enough on the larger economic system. However, the basic premise of behavioral economics—that our financial decisions are not made by rational, self-interested individuals, but rather by individuals who are influenced by emotions, biases, and social norms—is an important challenge to the traditional view of the economy.

The question now is: what should we do about this? Should we continue to bail out Fannie Mae and Freddie Mac, or should we allow the market to work its way out of this mess? The answer to this question is not easy, and there are many different arguments for both sides.

Some argue that bailing out Fannie Mae and Freddie Mac is the best way to save the economy. They argue that these companies are too big to fail, and that if they fail, the taxpayer will lose billions. Others argue that bailing out Fannie Mae and Freddie Mac is too risky, and that it is better to let the market work its way out of this mess. The argument for bailing out Fannie Mae and Freddie Mac is that it will prevent a recession. The argument against bailing out Fannie Mae and Freddie Mac is that it will create a moral hazard, and that it will encourage risky behavior in the future.

The truth is, there is no easy answer to this question. The best solution is likely to be a combination of both approaches. We need to provide some level of support to Fannie Mae and Freddie Mac, but we also need to allow the market to work its way out of this mess. This will require a careful balancing of competing interests, and it will require a lot of hard work. But if we do not do this, the consequences could be devastating.

When did elitism become a bad thing?

When did elitism become a bad thing? Whether you are a college student, a professional, or a member of the general public, you have probably heard the term "elitism" on a regular basis. The term is often used to describe people who believe that they are better than others, or who feel that they are entitled to special privileges. However, the reality is that elitism is a complex issue, and it is not always easy to determine whether it is good or bad.

In the following essay, I will explore the concept of elitism, and I will discuss some of the arguments for and against it. I will also provide some examples of how elitism can be both positive and negative. Finally, I will offer some suggestions for how we can overcome the negative effects of elitism.

What did you think about a 4-day workweek at UCF?
