Registration Woes To Be Studied

Some major changes in registration procedures were discussed to write of problems that beset students and administrators alike.

When the snow had cleared, FTU's enrollment had grown by more than 100, although exact number of students is not yet known.

Joining the beardarh and startarh that accompanied this week's registration, the administration moved quickly to see that they didn't happen again.

Dr. C. B. Gambrill, vice president of Academic Affairs announced Thursday morning that a "working committee" would be formed immediately to study the problems in the areas of registration and make suggestions on the entire process by next Monday.

Dr. Gambrill said that the committee would include students and administrators alike.

"This won't be just a public relations committee," Dr. Gambrill pledged. "It will be small and active and will be charged with finding ways to correct those problems."

"We want to be prepared to have the next registration go smoothly."

The administration's quick action should help still complaints that were mounting on all sides about this week's registration.

Long lines of students waiting to file through the registration gauntlet were bad enough, but some students, especially the new ones, found themselves closed out of a number of classes that they were required to take.

"I witnessed a number of freshmen girls crying in the halls from the frustration of having one class after another closed to them after being told there were still openings," said one professor. "And I'm sure the male students would be crying too if they dared."

"There has to be a quicker, more efficient way to handle registration," growled one student.

"If they don't find a way now, just think what will happen as the university continues to grow."

We are very concerned about registration," Dr. Gambrill stated. "That is why this committee will be established to quickly. We are aware of the problems and expect to do something about them."

Next week, the PTU will present a detailed explanation of registration woes as the administration, faculty and students see them, as well as their suggestions.

We Live in the Present
By the Past, but for the .

A significant step in the battle against water pollution and for the protection of Florida's fresh water was announced yesterday with the establishment of an Institute of Fresh Water Ecology at the University of Florida. The grant of $93,000 is the largest and most important grant FTU has ever received.

Yesterday's announcement was made at a special meeting held at the Gator Colisee, at the University of Florida. The purpose of the Institute is to investigate problems in water pollution, and control pollution and other research-related functions of the Department of Air and Water Resources, general recreation, and The Spirit of Giving was very strong at the announcement of Debbie Johnson, sponsored by the Alpha Phi Pi Fraternity, and Donna Herndon, sponsored by Taus Fraternity.

Major functions of the Institute will be (1) the investigation of applied ecological problems of local, regional, and national concern, with a continuing mission being to assist the State of Florida in its attempts to control pollution and other problems arising within its fresh water natural resources; (2) the encouragement and stimulation of research in all areas of fresh water ecology; (3) the teaching of both advanced undergraduate and graduate courses; and (4) the provision of a base for offering non-credit short courses, conferences, etc., in continuing education.

FTU's Funds Anticipated from the State-
Editorial

It Worked in England

Last week Great Britain decided to allow 18-year-old voters to get married, without parental consent, and become household heads. England stood back and brasied herself for an onslaught of young couples wanting to get married. There has been no election since the 18-year-olds have been given the vote, so as yet they haven’t screwed up any elections (as if they could). Much to the surprise of the tabloids (and some disappointments) of many of the English people there was no increase in marriages, and no excess property was sold. Last year at the same time was two more divorces, and both of the parties were over 21.

At any rate, it will be interesting to watch England to see if she goes to the extreme of the last six years. If she stays over 21, the entire prospect of a service career would be more exciting. Lowering the age for joining the armed forces could also be accomplished without disastrous results, as England is again going to prove. By the next time she goes to the extreme of the last six years, England will have to pay for England's excess property. Tariffs are paid by a small, active community.

In fact, if all the money presently being spent on the selective service program in this country over the past 2 years were spent on the armed forces, the entire prospect of a service career would be more exciting. Lowering the age for joining the armed forces could also be accomplished without disastrous results, as England is again going to prove. By the next time she goes to the extreme of the last six years, England will have to pay for England's excess property. Tariffs are paid by a small, active community.

The President of a highly successful and prominent university was once quoted as saying: "If I were to lose my money, I would be happy to have the property sold. I do not want to lose my money, so I am not going to sell the property." It is very likely that the President of Princeton was correct, because a recent survey of the students of the community showed that the students who want to share their income, encourage you to join the FTU Foundation. In this way, together, we can make sure that the students spend the money they have, have an investment in the future—not only of this University, but more importantly, in the lives of many students.

George King

Director FTU Foundation

Letters To The Editor

Support Mascot?

Dear Sir:

You’re getting kidded about having a football or a Titan or an Oregonian mascot. Why should we just try to predicate the students into the personality of the school?

Here is my response. I had not heard of the name of the mascot but was surprised that you did not have one. So, I asked.

How could it be anything else but Pegasus? After all, "Pegasus" does "carry our hopes, aspirations, and poetry into the skies." He is ancient and fantastic, "bridging the gap between the humanities and the sciences.

Pegasus could be costumed as one or the other of the Pegasuses (but be the buck half?) Why not use gold metal instead of just a name? And something more realistic to the connected symbolism.

"Reach for the Stars." Pegasus could be the name of the group of cheerleaders, as the squad of pretty girls performing synchronized dance.

"Hitch your wagon to a star." This could be used interchangeably with Pegasus.

"Where You Wish Upon A STAR" could be used interchangeably with Pegasus, individually and become our Alma Mater Hymn, after which you might have to go to the library and publish the book. Students more talented than I could possibly do it.

There are enough possibilities here for two or three football teams and something special, though. If you really want a mascot, if you like any of this time. If you laugh, I won’t be interested.

Intolerant

Bunnies Must Have Private Showings?

Dear Editor:

The constitution states that an American citizen has the right of pursuit of happiness and the freedom of expression. Why was violation committed in the first line of the "J" residence hall? Dean Proctor can not tell us. Why was there no "showing," or "display," in the living rooms and dining areas.

Dean Proctor

Students Thanked

Dear Editor:

Now that the full quarter is history, the Financial Services and all its staff would like to express our thanks to Mr. G. E. Claydon, Director of Physical Plant for his continued cooperation.
Alafaya Paving Is Promised

Orlando Paving Co. has been awarded a $51,000 contract to resurface 1,600 feet of Alafaya Trail, it was learned this week.

According to the State Department of Transportation, the awarding agency, work should begin on the project this week.

The narrow, hump-backed road would be completely repaved and widened, but the state indicated there was still insufficient travel on Alafaya to warrant the large expenses of the project.

The resurfacing will cover the rough spots in a three-mile section of the road from East Highway 56 to the Seminole County line. Secondary road funds will be used for the project.

At one time the Orange County Commission had decided to do the job, but it was taken over by the state agency which indicated that the resurfacing would be completed before classes began last October.

Delay followed delay. A state department official was quoted last November as saying that the contract had been let in October, but it had, no results were shown.

And during that time, there were several, serious accidents on Alafaya during rainy weather that usually turns the surface into a skating rink.

A county commissioner had told the FTU that the county that had been prepared last year to do the resurfacing job, and that the cost to taxpayers would have been only $16,000 for equipment and labor.

Although the state has certain strict rules for preparation and maintenance of roads, the cost difference was hard to explain.

County Commissioner Ralph Polok told the FTU that the county had the same standards for resurfacing the road as does the state, and it could have been done one heck of a lot cheaper.

"I'll be all for free enterprise," Polok said, "but when the county can do the job at one-third the cost, it would seem logical to let the county do it."

The county plans to resurface Alafaya last year was blunted when it was agreed to let the state do it.

"But the funds have been allocated for more than four months with no work done on it," Polok said, adding, "It's just an example of how red tape can bog the state down, and a perfect example of the resulting higher costs."

Polok said the surfacing job would be a good one, and would greatly improve the driving condition on the road.

NEXT THURSDAY, Jan. 15, Him, He & Me, a top singing trio which visited FTU last spring, will be back again this year to present a Multi-Multi-Purpose Room at 12:00 noon. Him, He & Me is the first of a series of groups and entertainers who will be using FTU to perform during the lunch hours. The series has been titled "Guess Who's Coming To Luncheon?" and is sponsored by the Village Center Student Advisory Board.

The village center is presenting this series with no cover charge and no minimum.

Chi Beta Alpha Is Explained

Chi Beta Alpha (XBA), a local FTU professional fraternity, was organized six months ago to foster the study of business in the university and the surrounding metropolitan area.

XBA has already gained special recognition from Delta Sigma Pi, the national professional fraternity in the field of commerce and business administration. Due to XBA's outstanding performance as a local chapter, Delta Sigma Pi will permit XBA (after final inspection and acceptance) to become a regular Delta Sigma Pi chapter next year instead of the normal waiting period for a new fraternity at a new university.

Sorority Greek Letter Rules Are Explained

Due to a recent communication from the national Greek organization to all campuses because of use of Greek letters by sororities and fraternities have been encouraged by the national organization for the discipline of their members.

According to B Gwen Sarchet, Director of Student Activities, Greek organizations were requested not to use Greek letters in the names of their sororities or fraternities or in anything pertaining to the sorority.

The ruling was set up by Dean Sarchet in coordination with the Women's Greek Letter Association. This rule was set up at FTU because in many cases, a local Greek (PTU) sorority or fraternity is local and is compared to the national, national sororities or fraternities.

This may occur in the case of a local group (with the letters of a national) receiving adverse publicity due to a problem within the sorority.
Fractured Funnies

I WANT TO RETURN THIS CHRISTMAS PRESENT.
MY HUSBAND GAVE IT TO ME.
ITS THE WRONG PRESENT.

ITS THE WRONG COLOR.
ITS THE WRONG SIZE.
AND ITS THE WRONG HUSBAND.

EVERY CHRISTMAS I REALIZE THAT.

"Burp!"

* Home Economics was all there was left!*

WELL, THATS ONE WAY TO SOLVE THE PARKING PROBLEM.
Do You Remember Buddy? Buddy Remembers FTU

Remember Buddy Hiltchington? Buddy remembers FTU to its students. Buddy is the 34-year-old boy who was just crippled several years ago in a construction accident. He continues to live in the four walls of the hospital.

Buddy always appreciated the calls, phone calls, and visitors of those who were always there to help. He would like to have more people come to visit. He says he would like to see more people come. He says he would see more people, he likes it.

"Thank you to the numerous gifts, visits, phone calls, and visiting of those who were always there to help. Buddy appreciated the calls, phone calls, and visits of those who were always there to help. He would like to have more people come to visit. He says he would like to see more people come. He says he would see more people, he likes it."

Buddy frequently expresses his desire for hamburgers, french fries, and playing cards, and loving the usual get at the hospital because he does not have a phone to call. Buddy has been receiving phone calls quite regularly, and he tells him how he is doing. Buddy promised me that he will get a haircut. We are using the contributions received for Buddy's fund for clothes and other personal items when he leaves the hospital. His progress looks very good.

Sex Mores - Packard's Topic

Vance Packard, well-known author, will give a talk on sex mores at 8:00 p.m. Tuesday, January 13, in the Science Auditorium. The admission is free and all topics related to the subject will be discussed.

Jet Noise is Studied

Dr. Llewellyn M. Elbert and Dr. Walter R. Thomas of the FTU Department of Biological Sciences have received a grant of $2,400 from the East Central Florida Regional Planning Council to study the effects of jet aircraft noise on wildlife around jet airports.

The first phase of the project will deal with the effects of jet aircraft noise on wildlife around jet airports. The second phase will study the effects of aircraft noise on wildlife in the surrounding area.

Johnny's Pizza Palace

OWNED AND OPERATED BY BILL AND HELEN BERN

4906 LAKE WHIDLEY DR., ORLANDO, FLORIDA, 32811-3423

Holly Queen

(Continued from Page 1)

With FTU's first graduating class drawing near, XBA is spearheading a drive to bring the College of Business Administration to make the Central Florida Business Community aware of FTU graduates and available human resources. XBA has doubled since last year. The College of Business Administration has grown from 612 to 308, and XBA now has 40 members and 40 candidates. XBA is working with Central Florida businessmen and other interested parties to place business college graduates.

Johnny's Pizza Palace

A new restaurant, Johnny's Pizza Palace, has opened in the Village Center. The restaurant offers a variety of pizzas and other Italian specialties. The restaurant is open daily for lunch and dinner.

Art Professors Profiled

We have all heard the saying that states one man's loss is another man's gain. And this certainly applies to Professor Steven D. Lotz, the chairman of the Art Department at FTU.

Professor Lotz came to Florida indirectly by way of the state of California where he received his B.A. from UCLA in 1961. While there he first became aware of art as a form and a means of expression in a profesional sense in his freshman year in 1959, as a junior, he had the opportunity to go to Vienna as a participant in the Undergraduate Art Program. He admits that this period of study and application in the Arts had no particular influence on him as he was still in the "green state," but the academy at Vienna was not bad, as he later tells us that he is not too late on.

Upon graduation from UCLA in 1961, Professor Lotz went to New York City where he worked on Wall Street as a Librarian. He moonlighted as a graphic artist and moonlighted in his own loft studio for a period of nine months. Prior to leaving N.Y.C. for Gainesville, Florida, in order to begin work on his Master's Degree in Fine Arts, he exhibited his first one-man art show under the auspices of the gallery called the I-14 group in Gainesville.

Paying became his major at the University of Florida where he obtained his MFA after study from 1961 to 1965. And upon the receipt of his Master's thesis he taught a year in Jacksonville, art in the grades 7-12 at a private girls' school. However, the Academy at Vienna must have been more of an influence than he has admitted, for in 1965 he decided to go back for a year's study. There he did painting, worked at the Academy, and taking advantage of the many famous and enduring works of art that prevail in the Imperial Museum of Vienna. Just a few of the many masters that can be seen there are representative of the Renaissance and are best typified by Mantegna and Giorgione ("The Three Philosophers"), as well as at the Academy where one can view works by Carpaccio and Gentile and Giovanni Bellini that are preoccupied with a religious theme. There are just a tiny fraction of the wealth of art that abound in these non-dimensional and dimensional forms.

All of the above have undoubtedly made a profound influence on Professor Steven D. Lotz, but let us not see what he would like to see accomplished in the area of Art curriculum offered at FTU. And it is profound in its own way also, as it offers a "fine" for Florida in the area of university art curricula.

First, he would like to see an emphasis on a strong program which would include urban planning, architecture, graphics, advertising design and the related arts that stress involvement in and for the community as a whole. And by this one must integrate art into and for the betterment of not only the art but for society that surrounds the arts.

Second, he would like to have the course in general education and implementation into the college curriculum taught. He would like to have the course in which human creativity is taught. He would like to have the course in which human creativity is taught. He would like to have the course in which human creativity is taught. He would like to have the course in which human creativity is taught.

And that is not too tall an order. We all know that the spirit of the times just happens to be a big size in but utterly a lot, and responsive to the teachings that would incorporate Art as an essential element in every school and college curriculum and should play a role in the world we live in.

Vincent Is Not Dead!!!
Parents Aid in Sex Ed.

By CHRIS VAN ORMER

The role of the school in teaching sex education is a highly debated one. The logic lectured on by Dr. F. D. Rohrer in the Education Seminar.

His talk was based on a curriculum for Kindergarten through grade twelve, which emphasizes family living concepts at the appropriate grade level in accordance with the students' sociological readiness. On the elementary level, the curriculum introduces students to concepts of biological growth and development and progresses to the basic aspects in later years. On the secondary level, the moral and psychological aspects are stressed.

In refutation, Rohrer pointed out that the basis of student readiness within the elementary level is the need to meet the students' voluntary question of personal development. The public school instructor would be filling in a gap between personal/religious instruction and social instruction.

The presentation was a great communication problem, which Dr. Rohrer proposes to solve in two ways. First, an acceptable teachers program on the subject must be established. The program would be introduced to the parents, and the teachers could then convince the parents of their competency. Secondly, the parents would be given some control over the materials used.

Parents may, however, be skeptical as to whether the parents' voluntary question of sex education is the role of the school. The public school instructor would be filling in a gap between personal/religious instruction and social instruction.

The program would be introduced to the parents, and the teachers could then convince the parents of their competency. Secondly, the parents would be given some control over the materials used.
The necessity and development of the Lake Claire project is unresolved between Student Government and the Physical Plant and President Milligan. On the one hand, Milligan hopes that delegation between students, SG, the administration, and the community may be the answer. The project, consisting of a recreation area around Lake Claire, was the prime SG project last spring. A committee was formed but failed to act during the spring, summer, and fall quarters. Meanwhile, Kanowski, the vice president, and the college government met during Christmas holidays to review and initiate the project. They went to the lake and did some tentative planning which coincided with last year’s proposals.

SG plans include boat docks, launching ramps for a water ski team, a water slide, a cleared beach area, cooking and rest room facilities, a sports field, and a hill overlooking the lake and beach. The hill will be constructed with the excess dirt from construction of buildings and parking areas.

The problem is getting the Lake Claire Project into a general plan and work schedule of the Physical Plant. Mr. James, planner and engineer in charge of the Lake Claire project, said that any project would have to work into the long range campus plan.

The Lake Claire project, which is working on the immediate and permanent solving problems, Lake Claire will have to wait a long, long time, several from the lake and an artificial and organized work can begin. The Physical Plant has also planned the project on low priority because they feel the new Olympic-size swimming pool which will be finished this spring will cool the interest and pressure on Lake Claire.

However, the main activities on Lake Claire will be panning, dancing, boating, fast ponying, and general relaxation, said Kanowski. Now, and again this spring, students will have nowhere to go to get off the campus if Lake Claire is not available. It has even been suggested to make the project a student-community project so no help is forthcoming from the administration.

To topograph the area has been completed as has the $100,000 proposal for recreational facilities for the beach. The main problem now is cooperation: cooperation and interest between the students, SG, the administration, and the community. Student Government has up to $18,000 to spend on the project and hopes to receive community donations of money, labor, and skilled supervision. With the money, labor, and cooperation of everyone involved, it would be improved as completed as has the study. SG’s administration, and community.

Dr. Schroeder said, “For our students and our community, we believe, they have not felt the lack of experience and height that worried others at the beginning of the season.

PTU best many of its opponents so badly during the fall season, that the victims have been reluctant to reply the PTU team, which many opposing coaches must have felt was a heavier on their schedule.

Dr. Rohrer was asked this week that he thought about the prospects for an undefeated season.

“If frankly we don’t see how we can help but have one off night,” he said. “But we have tremendous spirit, so...”

The PTU Student Health Center is now giving the second flu vaccine injection for those students who previously had the first injection. There will be no charge for this service.

According to the Health Center, it is now time for the second injection.

This week’s schedule is as follows:

**Recruiter**

- Starchaser
- Internal Revenue
- Statistics
- O’Brien & Herms
- Dyer & Morris
- Ernst & Ernst
- Metropolitan Life
- Metropolitan Life
- Orange County
- Public Schools
- IBM Corporation
- State of Florida
- Tax
- Various

**Positions**

- Management Trainee
- New Agent/Sec. Agent
- Tax Tech.
- Accountants
- Accountants
- Trainee
- Teachers
- Various

**Job interviews**

Job interviews for seniors who have gone begging in the pool. Suddenly this week, they were at a premium thanks to the tenacity of PTU’s management Director John O’Rourke. O’Rourke had, for months, been making telephone calls to prospective PTU team members to urge them to join the PTU team.

O’Rourke has, for months, been making telephone calls to prospective PTU team members to urge them to join the PTU team. O’Rourke, who has been on the job for six months, said he has been forced to use the phone to try to fill the PTU team. Signs around and suddenly found himself swamped with registrants. Nearly 200 were stopped by a boy at a table to pick up a registration form, all questions about interviews and take as a sample of a large book that "Rohrer had on hand which lists all the national firms that want the students." Rohrer said, "Adding the 280 seniors who have already been interviewed, we are about the entire senior class," O’Rourke said proudly Tuesday, as he began putting his tables away.
The following question-answer series pertains to the recent draft lottery, was provided by the National Headquarters of the Selective Service System. The FaultLine reproduces the series for the benefit of all students affected by the lottery.

Question: My birth date was drawn number 216 in the lottery. I am in school and will be until June 1973. Will the 216 number apply when I reach the age of 26, or will that year's number control?

Answer: The random sequence number was assigned in the December 1969 drawing and will apply as long as you remain subject to induction for military service.

Question: Presently I am in Class 1-A but this deferment will expire on February 28, 1970. I have number 306 from the lottery. I will become 26 on May 1, 1970. If the local board does not reach my number before my 26th birthday, will what my status be?

Answer: If the local board has not reached your number before your 26th birthday, you will, upon reaching age 26, leave the pool of those available for induction as part of the 1970 first priority selection group.

Question: I am 19 years old, how do I have for deferment, and have sequence number 300. If I am not deferred in 1970, can I be deferred in 1971 or in subsequent years?

Answer: You are eligible for deferment to age 28 or age 35 if you are married with dependent children. In 1971 you will have a decreased vulnerability. However, if the calls for the draft in 1971 are high enough that they cannot be met by the 1971 sequence group, the local boards will then select from the supply of manpower that might be left over from 1970. As each year goes by without your induction taking place you will have a decreasing vulnerability.

Question: Next February I will turn 21. Do I enter the lottery pool on that date?

Answer: No. You won't be included in the random sequence selection for the 1971 lottery. The 1970 pool is limited to those born on or after January 1, 1944 and on or before December 31, 1950.

Question: Will there be any more drawings?

Answer: Yes. A new random sequence will be made for each calendar year for those registrants attaining the age of 19.

Question: My birthday in the lottery gave me sequence number 225 and I was in Class I-A next year. Can I count on not being inducted in 1970?

Answer: No, because the total manpower requirements are not known and cannot be reasonably estimated at this time.

Question: I have random sequence number 75. When my local board inducts me will other local boards be inducting registrants with this same sequence number?

Answer: Not necessarily. It is expected that all local boards will be inducting registrants at about the same pace, but because local boards have varying percentages of their registrants in deferred status, and do not have the same number of registrants with the same birthdays, they may not be inducting at any one time all available registrants with a particular random sequence number.

Question: I have sequence number 250. If I want to volunteer for induction, will my local board wait until 250 before they will accept me as a volunteer?

Answer: No. They may accept you as a volunteer prior to reaching your sequence number in the induction processing.

Question: I am 19 years old and now deferred as a student. My random sequence number is 200. If sequence number 300 is not reached in 1970 in my local board, will I be home free when my deferment ends in 1977?

Answer: No. If at the time you are classified I-A in 1973 your local board has not reached sequence number 300 in their induction processing, you will simply be placed in that sequence and you may or may not be reached for induction in 1977. You will still have sequence number 200. If at the time you are classified I-A your local board has reached random sequence number 300 in 1973 you will be subject to induction at the head of the 1973 select group.

By CHRIS VAN OMER

How would you, as a student, like to evaluate your professors at the end of the quarter by means of an anonymous survey form? For her permeation speech for Dr. Arnold’s speech class, Kristen Comish developed this idea after researching rating the professors numerically. Those ratings were averaged and all professors were given a rank which was not publicly disclosed. Some of the questions were: Are you able to pass the quizzes without reading the material? Does the professor return your papers on time? Does the professor invite discussion during his lectures? Some university’s ask their students the question: “Which professor made the most difference in your life?” The professors should be willing to listen to the evaluation. The students would probably want the faculty to be against any criticizing on their part. Some universities do have their experience in the classrooms where they do not want the survey sent, but now professors do have their experience in the classrooms where they do want the survey sent.

The professor should be willing to listen to the evaluation. The students would probably want the faculty to be against any criticizing on their part.
