In later quarters, advance registration was accomplished more readily, with no more than three-hour delay for each registration period. In fact, during the most recent advance registration, there were times when signup even ran ahead of appointment schedules. (Photo by Chuck Seibert)

Decision Reached At June Meeting

We Live in the Present.
By the... but
for the...

Vol 4 No. 34  FTU, Orlando, Florida July 28, 1972

July Research Grants Fund Major Projects

Research grants have financed two major research projects during July involving FTU faculty and students. Prior to this month, 663 grants had been contributed for 46 programs in 1972.

An environmental study of Kennedy Space Center has been conducted by four faculty members and eight students and will continue for five years. The researchers are devoting full-time effort during the summer quarter and work part-time during the academic year.

The National Institute of Health gave approximately $15,000 for a study to be conducted by Dr. Henry Van Tyvey, an assistant professor in social sciences, and Dr. Philip Tell, an assistant professor in social sciences, and the FTU Psychology Department. Dr. Van Tyvey will concentrate on biological studies of sleep and dreams, and Dr. Tell’s interest is in short-term memory and the deal.

The project that began June 1 will be financed by $95,000 through June 1973.

Information and material is being gathered that will contribute to the students’ pursuit of master’s degree in biological sciences. The project is the Kennedy Space Center study. The project that began June 1 will be financed by $95,000 through June 1973. Information and material is being gathered that will contribute to the students’ pursuit of a master’s degree in biological sciences.

The purposes of the research study are to investigate and document the life forms and ecology of the area, to determine both short and long-term dynamics of the ecosysystem, to study the effects of both internal and external forces on these dynamic systems and to provide meaningful experience to graduates and undergraduate students who are developing careers in bio-environmental studies.

Summer Quarter Enrollment 3,251

The total enrollment for FTU during summer quarter is 3,251. Approximately 71 per cent of the enrollment consists of men and 23 per cent are women. Enrollment figures broken down college by college are:

Education, 1,026; 46 per cent men, 56 per cent women.
Business Administration, 666; 91 per cent men, 9 per cent women.
Social Sciences, 552; 73 per cent men, 27 per cent women.
Natural Sciences, 365; 72 per cent men, 28 per cent women.
Engineering, 287, 91.5 per cent men, 8 per cent women.
Humanities, 216; 55 per cent men, 45 per cent women.

General Studies, 129; 55 per cent men, 45 per cent women.

(Continued on Page 6)

Pre-Registration Terminated

By Margaret Shaughnessy.

Advance registration for fall quarter and future quarters has been cancelled.

News of this cancellation by chance drifted into the hands of Student Government last week.

The decision was made at the June 7 Council of Deans meeting. Vice President for Academic Affairs C. B. Gambrell asked Assistant Vice President of Academic Administration Leland Jackson to present the case.

Jackson stated that it was the consensus of the dean to cancel advance registration; no vote was taken.

There are numerous reasons for this cancellation, the basic one being academic considerations rather than administrative reasons,” stated Jackson. “There have been student and teacher complaints that pre-registration took away class time that was crucial to reviewing exams. Also within the quarter system, too much of the teacher’s time has been taken up with registration, drop and add, advising and pre-registration duties.”

The duplication of time and effort is another reason given for the cancellation. Personnel had to be taken away from their regular duties in order to work at pre-registration. Time and costs in using computers also were increased.

The duplication of time and effort is another reason given for the cancellation. Personnel had to be taken away from their regular duties in order to work at pre-registration. Time and costs in using computers also were increased.

Jackson stated that it was the consensus of the dean to cancel advance registration; no vote was taken.

There are numerous reasons for this cancellation, the basic one being academic considerations rather than administrative reasons.”

“The cancellation received more publicity than did any other alternative. We realized the one disadvantage would be inconvenience to a student’s vacation time; however, we are permitting students to have other students register for them, so this is one alternative,” said Jackson.

“Another alternative is late registration; however, state law requires that a fee be charged for this.”

Advance registration started in the 1971 spring quarter.

“We started pre-registration in order to get the students through faster and cut down on errors. I thought the system was progressing well,” said system consultant Bernard Seissinger, well, one of the implementers of advance registration.

Jackson, however, was vague about the reasons for pre-registration. “I suspect its use was modeled after the examples of...”

DR. LELAND JACKSON

more than one registration per quarter.

Jackson stated that it was the consensus of the dean to cancel advance registration; no vote was taken.

“There are numerous reasons for the cancellation, the basic one being academic considerations rather than administrative reasons,” stated Jackson. “There have been student and teacher complaints that pre-registration took away class time that was crucial to reviewing exams. “We started pre-registration in order to get the students through faster and cut down on errors. I thought the system was progressing well,” said system consultant Bernard Seissinger, well, one of the implementers of advance registration.

Jackson, however, was vague about the reasons for pre-registration. “I suspect its use was modeled after the examples of...

W. DAN CHAPMAN

the Universities of Florida and South Florida. They of course have to have pre-registration because of their large numbers.”

With the proposed enrollment for fall being 7,000 only three days are needed to register the entire student body in good order, according to Director of Admissions Ed Knight. “Why string it out any longer?” he suggested as one of the probable considerations.
It's Gone. But Why?

As we wave aloha to advance registration, which is slowly sinking in the west, it might profit us to look at exactly what is going on, and why.

On the surface, the immediate reaction on the part of most students will be one of rage and persecuted indignation. It does appear, as a matter of fact, that the whole thing was handled in a rather unusual manner.

ACCORDING TO what FTU investigators could uncover, the Council of Academic Deans is being handed the responsibility for the managements. (See story Page 1.) The maneuver, however, was not made to coincide with the matter June 7, but several of the deans who attended do not even remember the matter coming up, let alone being voted upon. It finally came to light that there was no vote at all, but rather a decision was made by consensus. (Nodding of heads?)

The minutes of the meeting (which were not available to the FTU through several sources, but were finally given by one of the deans on the council) bear out the fact that the matter was brought up at the June 5 meeting. The minutes state, "C. B. Gambrell, vice president for academic affairs, suggested to Dr. Leland Jackson, associate vice president for academic affairs, to hold the registration be held at one time, rather than two.

There the minutes stop. We can assume that some heads were nodded (we have some information which would lead us to believe that some heads were also shaken) and upon that foundation, orders were given to halt advance registration.

IT BECOMES droning repetition to harp that, once again, no student input was utilized in the decision. In fact, to talk to some of the deans, actually very little input at all, apparently, was utilized in the decision. We also chuckle to--no, make that--to think that the "decision" was made on June 7, and it was not until the latter part of last week that any students found out about it.

The Board of Regents has approved a bachelor's degree program in engineering technology, to begin on campus fall. The program, specifically designated to complement Associate of Science degree transfer students, will offer a total of 12 courses in fall. EN361, Technological and Management, EN331, Hydraulics and Fluids, and EN351, Work Analysis.

A Matter of Opinion

By Gabriel Yanni

For all those who do not know it yet, FTU has one own obstacle course. It is situated from behind the Library Building halfway down to Atlantic Street. One day, a group of 12 of us, after removing mud from the track (and you can imagine that mud clogs your engines, with a little speed you may eventually flip over),

But he delighted though. Nobody is going to take away from you. Nor the students anyway, until more money is made available to complete the original university growth plan. By that time your children will be of age to come to FTU.

According to Physical Planning, this temporary parking place will make room for new buildings and other paraphernalia. Meanwhile, keep on hoping it does not rain. Until it rains, you will be willing to debate whether it will truly save any money or not; but, that as will the overall success of the maneuver, remains to be seen.

Four more weeks until we get to the end of this quarter. While we are gone for some few weeks, let the splinkers run wild, let all the responsibilities unof their obligations, get hysterical, and when we come back, man will be a new and recharged about in the university bulletin.
PTU's recently created clinic for communicative disorders, cramped in two offices on the first floor of the Engineering Building, is a world filled with secret treasures intended to help children with speech and hearing disorders learn to correct their problems.

In the world of hearing and speech-impaired children, even the simplest toy becomes a tool for learning. According to Mrs. Floyd V. Johansen, head of the program which was begun last winter quarter, "The mirror is the chief visual aid for all types of disorders. Children can watch themselves form words and attempt to correct their mistakes."

Even something as frivolous as a pair of mouse ears is used by the speech pathologist to teach children that "ears are for hearing." A dime store pinwheel is used for blowing, "to teach children breath control for proper word formation."

The program at PTU, which now includes two instructors, approximately 20 students and 13 participants (aged 4-54) with a variety of disorders, was set up "primarily to instruct PTU students in clinical procedures," said Mrs. Johansen. "The program now seems to be filling a definite need in the community. There are a few places in the county where children and adults with communicative disorders can go for help, but apparently not enough. Our program is growing steadily and we expect to move into larger, permanent quarters in the fall," said Mrs. Johansen.

Brain damage, cerebral palsy, speech and hearing disorders learn to correct their problems. The two therapy rooms look like toy stores, boasting a vast array of such treasures as puppets, language games, picture cards, squeeze toys and a cardboard treasure chest with candy rewards. "Most of our students act only as observers in the therapy sessions," said Mrs. Johansen, "but we currently have about 25, Kathy Mahler and Jill Davis, who participate in therapy under close supervision. Eventually the program is intended to provide practical, clinical training for graduate students."

Miss Cynthia Ramsey is currently conducting a second program for hearing-impaired children, funded by the Easter Seal Society. "We are expanding our PTU program to include diagnostic and evaluative services as well as clinical therapy, and our services are open to both students and non-students."

The clinic also works with articulation and stuttering disorders, language deficiencies and teaches lip reading to children with hearing problems. According to Mrs. Johansen, an associate professor, "It may take several years to correct some of the disorders we deal with."

The National Science Foundation (NSF) has awarded FTU $39,600 in matching funds for Counselors Sent to 

'FTU Emphasis'
The emphasis is an eight-page newsletter for all highs schools in the area, as well as all the junior colleges. Humphrey said the emphasis is a wrap-up of FTU news that counselors may pass on to their students. He added that about 85 per cent of all junior college transfer students at FTU come from the six area community colleges which receive the FTU emphasis.

The funds will be matched by state funds and used to buy equipment for biological sciences and electrical engineering. A digital computer will be bought with the $200,000 grant, which is being directed by Dr. Benjamin Patz, associate professor of electrical and computer engineering. Dr. Harvey Miller, chairman of biological sciences, will direct a $19,600 grant which will be spent on measuring instruments and laboratory equipment.

FTU Gets $39,600

The National Science Foundation (NSF) has awarded FTU $39,600 in matching funds for counselors sent to 'FTU Emphasis'.

A newsletter for high school and community college counselors is being published quarterly by Dr. Robert H. Humphrey, FTU coordinator of junior college relations. The newsletter, the FTU Emphasis, is an eight-page publication which first came out in February.

Low Polluting Max In Urban Design Test

A group of engineering students are completing final tests on MAX, a unique low pollution automobile, which will be entered in the first annual Urban Vehicle Design Competition August 6-11. MAX will be matched against entries from 72 other colleges and universities at the General Motors Proving Grounds in Milford, Mich.

The FTU entry, a 1972 Gremlin which is now powered by compressed natural gas, also features a new anti-skid braking system designed by the students plus a front bumper design that has been tested to withstand impact at 10 miles an hour.

The vehicle will be scored on safety features, cost, ease of handling and other areas. Pollution will be gauged using the 1976 emissions standards set by Congress.

Meanwhile, MAX and its mentors can be found tucked away in the campus garage (former site of the Theatre Tent) where last-minute adjustments are being made in preparation for the journey northward. The project is under the joint leadership of student director, Bob Bender, a June engineering graduate, and Dr. Bruce Nimm, assistant professor of mechanical engineering.

The student team represents the Mechanical Engineering and Aerospace Science Club, which won top prize with MAX during the first annual Engineers Fair in March. Funds for the project were supplied by Student Government and other sources. Tests for MAX were donated by Seam and Roebuck, while the natural gas was contributed by Florida Gas.

VC Extension Open By Fall

Construction of the Village Center extension will be finished by the middle of August. The additional area will include office, recreation and dining space. "I hope it won't be too much longer," said Fred E. Clayton, physical planning director, concerning the beginning of construction on the Humanities Building. A parking lot for 900 cars will be built near the new building.

Grass has been planted in the median strip of the main road entering the campus. Clayton indicated more shrubs and other landscaping will be added when there is more money available. "We are crawling before walking, as we usually do," he said.

VC Program Director Gives Parting Thoughts

Village Center Program Director Wanda Russell's last official mission was to a campus was spent reflecting on the VC's past and future.

Mrs. Russell, who came to FTU when the school opened in 1968, left campus recently to accept a position as associate dean of students at Rollins College, Winter Park.

"When we first began FTU, our staff felt that the students were deprived of the traditional barrage of college activities. There were no facilities, no grass, no athletic programs, no pool. We soon began to learn we were wrong. The students were so tied up and excited to be involved in the first year of university activity they didn't mind tromping through sand, and so on.

"Students thought it was a lark at first to go and explore the campus grounds. That spirit, above all, made me appreciate FTU," said Mrs. Russell.

On that early note Mrs. Russell, as VC program director, and other Village Center personnel set about providing a continuous program of varied activities for the enjoyment of students.

As early as 1968 the VC offered a full slate of recent popular movies, pool parties and other activities, Mrs. Russell said.

More recently the Center has offered appearances by nationally known bands and speakers, talent shows, a bizarre market and art sale, a college bowl, bridge tournaments and a regular coffeehouse with student talent.

The real turning point in VC programming came in 1971. "That marked the first of our daytime programs, the appearance of Buffalo Bob Smith and Howdy Doody. We knew we had to break away from past molds and form new programming especially for our campus.

Since then the VC has offered an array of daytime programs geared to the commuter student, including appearances by the Serendipity Singers and Big Sikh and the Greats, a popular local singing group.

"With our new extension we will be able to establish a campus atmosphere," Mrs. Russell said.

"The Village Center will come to mean a pulling together of the students' leisure time. With the student organization offices, recreation rooms, cafes and program room all centered in one place, we will give students a living place, and so doing will have a captive audience for our programs."
Fear Not, I Bring Tidings...

It's The Same Old Story, A Fight For Love And Glory...Play It Again, Sam.

(Edward's Note: There is an adage in the newspaper business that if you send out three reporters on the same assignment they will write three different stories. The same is true for three aspiring FTU students who are now spending their summer as news interns for the Orlando Sentinel. Since the editor and news director are also members of the FTU staff, we have asked them to give our readers some idea of what it is like out in the real world.)

Sharon Marek, 22, is a senior majoring in communication. Miss Marek has worked with the Future organ, Que Pasa? students granted the opportunity of after ream of news stories that will morning to the point that they
does) expressively:
enaught a couple hundred enlightenment.

Station To Open Despite $ Lack

By Roger Pynn

WFTU Radio is broke. However, the station will be back in operation in fall quarter, station manager, Bill Ivey, said this week.

Student Government has imposed a summer spending moratorium and has denied a funding request by the Broadcast Club, which operates the radio facility.

Ivey said a study has been initiated to find an alternate method of financing the broadcast operation. The study will include a survey of student interest in the radio station, how many receivers are on campus and the types of radio service students desire.

Struggling to stay alive, the Broadcast Club has ordered four "carrier current" transmitting units. The small transmitters beam a 60 watt signal through the electrical wiring systems of buildings.

Ivey explained preliminary plans call for transmitters in dormitory buildings and the Village Center and Administration Building if possible. Dorms will get first consideration because of the potential constant audience, he added.

Mechanical problems have plagued WFTU since it went on the air in January 1969. Last quarter, the much-used transmitter that became a weak signal across campus finally died. "It just up," Ivey said.

Funding problems have hampered the acquisition of adequate equipment, and the facilities have begun to deteriorate. Most of the audio reproduction equipment is second-hand material donated by area broadcasters.

Ivey explained SG is reluctant to allocate funds to the station operation because of the limited nature of student participation. Most members of the club are communication students who use the radio station as a way to get practical experience in their radio field.

SG President Steve Adamick explained a bill is being drafted on student dormitory fees in the fall. He added that he can see some SG monies may be available for the station.

Ivey's summer budget request included money for an additional transmitter, two different types of tape recorders, music contracts and an all-important radio control board.

"Our problem is simply that the equipment we have operates at below 65 percent efficiency. Our new transmitters will carry a 90 percent rating and it would be easier--technically speaking and from a listening standpoint--to push that scratchy type of signal to our audience," Ivey said.

In addition, radio enthusiasts feel Student Government funding hampered the station's ability as a free news media.

For instance, the Future newspaper is funded as a line item that Student Government reviews and then sends on to the university administration. This, Ivey points out, gives Student Government officials a chance to review the spending, but keeps the newspaper out of political football.

"We feel WFTU can be an effective entertainment medium on campus and a valuable news and information bureau," Ivey said.

"Radio needs to be given a fair chance," he continued. To think of radio as a club is wrong. The Broadcast Club only administers and attempts to staff the station. We are not a social group, rather, we are a service club.

The junior communication major said station personnel have been contacted by SG officials for help in obtaining funds, but SG is reluctant to give money based on education and professional or near-professional training.

Ivey pointed out, however, that Student Government reviews and then sends a line item that Student Government has no funds available to do anything for dormitory students who wish to be tested.

There is still a possibility a for men and women.

"We intend to strive for a professional or near-professional sound," Ivey said, adding, although the exact format is up in the air, it will include music and features to appeal to every person on campus.

We are programming to and for the students," Ivey continued. The early morning sound of WFTU, which will broadcast 15-18 hours each day, will be "easy to get up to," he said, and during the daytime, specialty programs are planned. Afternoons will be highlighted by up-tempo, middle-of-the-road music which will be current, with the emphasis on good music. On nights, as the radio station will be moving to a new location and are remodelling the studio. With the fall quarter arrival of Dr. Thomas Morgan, who beyond the building where the transmitter will be transmitted, WFTU students in parking lots near the dorms and those with transistor radio sets in their cars will pick up its signal.

Although many official staff numbers for fall have been tentatively decided upon, there is always room for more interested students at the radio station, Ivey said.

"The only requirement is that you have not been a carrier current student, which means it can have for announcers that they will have a third class permit from the Federal Communications Commission," he stated.

Team Of Marines To Talk Tuesday

The U.S. Marine Corps officer selection team from Jacksonville will be on campus Tuesday to discuss Marine Corps opportunities for men and women.

The team will be available in the Village Center to interview, counsel and test students interested in joining the Corps.

There are no funds available to do anything for dormitory students who wish to be tested.

He said station personnel have contacted Student Government for officer training, and SG has not been able to help them out.

WFTU will have a broadcast training program offered for radio of approximately 300 years undergraduates and seniors.

WFTU Radio Airs In Fall

By Mary Anna Jackson

A new WFTU radio station will be on the air in fall, with new sound, new studios, new broadcast radius and new staff and even a new spot on the AM dial (640 instead of 640).

Bill Ivey, acting station manager for summer quarter, said when the station goes on the air in fall, its programming content will be varied, with a heavy emphasis on news, from international to campus. He added that there is a possibility the station may use either a wire service or stringers for news outside the community.

"We intend to strive for a professional or near-professional sound," Ivey said, adding, although the exact format is up in the air, it will include music and features to appeal to every person on campus.

You want entertainment? A risque peek at a slice of life? A poignant story with great characters? And even a touch of history? Then go to the "Cabaret" (now playing at the Colony) for an inside view of 1930s Berlin. Originally taken from the play "I Am a Camera" and later made into a disarmingly successful Broadway musical in the 1960s, "Cabaret" is an even more meaningful movie. The effect is so good because its close-up of the life and people of pre-WWII Germany. It is so well directed in every detail by Bob Fosse that the outcome is touching and enjoyable, yet frightening. The audience becomes emotionally involved with each character and his role in the growing Nazi movement in Germany.

All the Germans are manoeuvred like pawns in the game of Nazism. Through vulgarity, tyranny and its decline of morality and value in Germany is obvious and, as look in retrospect, is so easy to see how Hitler and his "goose-steppers" moved in.

Liza Minnelli is very good as Sally, the American girl working in the Kit Kat Club trying to make a name for herself as an actress. Her talent is good and Sally decides to have an abortion rather than settle down to "dirt" with Brian (Michael York) who wants to marry and return to England. He seems to be the only person who realises the danger of the situation. Joop Grey is outstanding as the club's emcee. Made up in white face and extravagant costumes and makeup, Joop grey even over the Kit Kat stage. The emcee and the songs and story make the music and the story smoothly into one.

There are many humorous bits of dialogue and characterization, especially in the scenes when Natalie, a rich, innocent Jewish girl, asks Sally for her advice about how to handle a crush from one of Sally's. Also, the emcee and Sally perform the song with the perfect touch of vulgarity.

Overall, however, the story is a very human one. It was a German citizen head for the fall, the emcee, and the emcee is also right to say that it is a very human story. It is done even worse for Germany and the world than they could have ever imagined. It is worth noting now for a fine film and a fine time at the "Cabaret."

---

Dean of Social Sciences Bernard Kissel stated he had no objection to the matter.

Dean of Natural Sciences Bernard Kissel stated his position favoring the cancellation. "We do not have time or resources to devote to pre-registration. Every time we have had pre-registration, there have been problems. I don't think it was worthwhile," he said.

"We can give better service to students at one registration. It cuts down on misunderstandings and inconveniences that can last until mid-quarter. All current students still have their pre-registration from last year, and we think more people will come better this year," said Prof. Lawrence Tanenbaum, dean of students.

The department stopped pre-registration for graduate students last winter and only had partial pre-registration in the spring.

In opposition to the cancellation, Student Government President Joel Greenberg said a resolution that would reinstatement of the pre-registration would be adopted by the end of the week and the pre-registration would be held for the spring quarter to prevent the inconvenience that can last until mid-quarter. All current students still have their pre-registration from last year, and we think more people will come better this year," said Prof. Lawrence Tanenbaum, dean of students.

FutUre FOR FRIDAY, JULY 28, 1972

IF YOU WERE BORN TODAY:

REACHING INTO THE DARKNESS that exists into eternity, I have discovered the true meaning of time. A man records time only to know how far he is behind. A woman records time to find out how far it is until the truly great philosopher does not wear a watch. He cannot afford one. Nymphs do not know what time it is. They wouldn't understand anyway. They are somewhat like you down here in that respect.

TAURUS:

FLASH! A long-lost girl, each relative whom you didn't know you had, dies this week in Palm Springs. He will die from a heart attack upon learning that he made his 19th million. CATCH! He didn't know he had you, either, and left his fortune to the campaign to protect Millard Fillmore.

GEMINI:

You are witty, charming, clever, dashingly handsome, and very sexy. You were also, by some freak of nature, born under the same sign. Isn't that a coincidence? Do you realize that only one out of 11 persons are born in our sign? Singularly amazing. Small world, isn't it?

CANCER:

Cancer lurks around the corner for you in the form of a camouflaged telephone pole. Watch it!

LEO:

There are 16 hungry Hungarians looking for your mother. They keep saying "Darling" and are carrying large, sharpened bananas. I wouldn't let them in unless they can tell you who was used to be the catcher for the Oakland Raiders in 1963. If they have to think about it, you know they're not really Hungarians, but are Polacks. Everybody knows Mason Williams was their catcher in 1963, before he injured his hand instead. Tough break, kid.

VIRGO:

Don't try to start anything legal, ethical, when you didn't know you had, dies this week in Palm Springs. He will die from a heart attack upon learning that he made his 19th million. CATCH! He didn't know he had you, either, and left his fortune to the campaign to protect Millard Fillmore.

LIBRA:

Remember the Maine! Remember the Alamo! Most of all, remember last week!

SCORPIO:

Aha! Caught you, didn't I? You little booger, you didn't think you could get away with that for long, now did you?

SAGITTARIUS:

If you ask your age this week tell them you're old enough to know better, but young enough not to care.

CAPRICORN:

It has come to the attention of this board that your overall grades have fallen below the normal standing this quarter. We would be concerned, except for the fact that this board has also discovered that all the grades for the entire student body are down below average this quarter. In fact, this board is seriously considering building the largest magnetic computer tapes bearing all record of this quarter that have ever existed. What is your vote?
