Research Park Possible

By Jerry Brooks

Plans for the establishment of a scientific research institute in the Orlando area are currently being studied by members of central Florida universities and businesses.

FTU President Charles N. Millican, a member of the Orlando Area Chamber of Commerce and the Committee of 200, suggested about a year ago the committee look into the possibility of establishing a research park in the area. Feeling that the project could be of significant value to the Orlando metropolitan area the committee of 200 established a Research Park Task Force to study the idea and make recommendations.

After a year of work the task force recommended that the research park be devoted solely to research and not a combination research-industrial park. A recommendation.

Research Park in Area. Feeling that the project possible land site was located in a select metropolitan area.

As plans now stand, the research facility, known as the Orlando Area Research and Development Institute, will be a non-profit organization operating under a board of directors. The board of directors will include the president of FTU, the president of Rollins College, a representative from the Committee of 200 and a representative from private industry.

"The Institute’s main function," said Dr. Leslie Ellis, Dean of Research and Graduate Studies at FTU, "will be to conduct contractual research for business, industry and government agencies."

According to Ellis, the institute would have a small resident staff consisting of a director, with a scientific background in research, secretarial assistants, laboratory technicians and researchers.

Research grants will be awarded to the institute, which in turn will draw on the FTU and Rollins College community for the necessary technical expertise required to research the problem. The institute may ask university professors for advice in solving a problem or ask the university to release the professor for a period of time to do research for the institute. The costs involved in replacing the professor with a visiting professor would be absorbed by the institute.

Ellis added that the research institute would provide good part-time job opportunities for qualified graduate and advanced undergraduate students from area universities.

Some feel that like other research parks the Orlando Area Research and Development Institute would act like a magnet to attract industrial research into the park, and because of the institute’s research capabilities make Orlando an attractive area for industry.

The institute is modeled after the Triangle Research Park in North Carolina. This non-profit research park operates in cooperation with the University of North Carolina, Duke University, and North Carolina State University. The project began with the construction of a single building; the park now includes seven buildings surrounded by over 20 facilities constructed by industry and government.

Tentative plans for Orlando’s research institute call for the construction of a 20,000 square foot building with initial operating funds provided by the Chamber of Commerce. According to A. H. Timberman of the Chamber of Commerce, the exact method of raising the necessary funds to keep the institute running for the first few years have not been determined yet.

Millican said he was pleased to see significant cooperation between the organizations involved with the research institute.

FTU vs. USF For New School

By Alan Crowe

FTU may vie with the University of South Florida (USF) to obtain a school of architecture.

An article published in the Orlando Sentinel Star last Saturday reported the State Board of Regents (BOR) was considering FTU as a possible site for a new school of architecture because many northern firms were designing Florida’s buildings. A central location was desired as not to duplicate courses offered by the other architecture schools at Florida State University in Tallahassee and the University of Miami.

According to the Sentinel, USF has an advantage because the House Speaker and the Senate President both reside in Tampa, but U.S. Senator Ed Gurney has his Tallahassee home, Kevin Wadsworth, working with the state chancellor’s office and the cabinet to boost FTU.

State University System (SUS) Chancellor, Robert Mautz, contends that the talk of a new architecture school is premature, according to an article appearing in the USF “Oracle.”

Mautz further warned that the BOR has not yet decided whether a new school should be formed and that the newspapers have more in print on the subject than he has on his desk.

Although a joint survey by the BOR and the American Institute of Architects favored USF, Mautz personally favors FTU because of its central state location and overall program.

In a meeting with President Charles N. Millican and John R. Bolte, vice president for Academic Affairs, Millican described FTU’s chances for getting the new architectural school at 50-50.

When asked what advantages there were for locating the school here, Bolte said FTU has two schools “directly supportive” of an architectural school.

State Law Opens Files

By Jerry Brooks

Florida Statute 119.01 says all state, county and municipal records shall be at all times open for personal inspection by any citizen of Florida, and those in charge of such records shall not refuse this privilege to any citizen.

Opponennent of the “open file” policy maintain that under the Omnibus Education Act, the Board of Regents (BOR) could restrict access to some employees’ records.

But Richard said the cabinet would have the final say concerning the BOR’s request to withhold employee records, and the cabinet has twice refused to approve such a request. The law is clearly spelled out in Florida Statute 119, said Richard.

FTU Student Government (SG) President Lee Constantine said he hopes FTU will not prohibit student access to faculty evaluation records, and he said he sees no need for a student to go any deeper into a faculty member’s record than the evaluations.

Constantine said since students know they will never have access to faculty evaluation results, they tend to make drawings on the answer sheet and approach the evaluation with apathy.

In a recent meeting with Gov. Reuben Askew in Tallahassee, Constantine said the Governor supported the “open file” policy, and voted against the BOR’s position when it came before the Cabinet.

Bill Davis, University of South Florida Student Government President, said he would file a civil suit as a taxpaying citizen if USF officials refused to comply with the law and produce a letter written by a University official concerning USF’s SG constitution.

Richard said that any student who requests faculty records and is refused is entitled to file suit against the university.
Federal Grant To Develop Skills

A $34,000 federally funded grant has been recently awarded to FTU Personnel Services Division, for the development of a program to build management skills of university supervisory and management personnel.

Personnel Services Director J. Thomas Simmons announced the award was granted under the Intergovernmental Personnel Act (IPA) of 1970. A total of 23 grants were awarded this year, and were authorized by the IPA this year, but only two were awarded to state universities in Florida.

The $34,000 is a significant portion of the total money, distributed yearly throughout the state, Simmons said, and was presented on the basis of a Personnel Services proposal submitted to the IPA.

Former Benefits Coordinator Gary Hollingsworth assumed management of the program Jan. 1. Hollingsworth holds a graduate degree in communications.

Beginning in March, the program will consist of short courses, and a seminar-type exchange of ideas, to develop more effective management on the supervisory/management level.

Architecture School (from pg. 1)

In the College of Humanities and Social Sciences, plans continue to supplement the architecture school in the area of creative design. The College of Engineering offers courses dealing with the practical aspects of building construction.

Bolte said two new faculty members could be added this year, with the possibility of four to five new members would be added for the next couple of years.

"The space for the school would be no problem, Bolte said, although he would not speculate as to how much the building the school would be housed in. Once the Humanities and Fine Arts building is completed, many departments will be relocating he added.

Millican agreed with Bruce Millican, a regent staff member, said that the new architectural school would probably not admit any students before the fall of 1976.

When asked if there were any disadvantages in locating the new school at FTU, Millican quickly replied, "None."

SG Proposes WATS Line a $150 Million line permitting student dialing will cut long-distance calls to all points in the nation by 99 percent, according to a report submitted by Student Senate action, it appeared early this week. However, the College of Engineering, President Lee Constantine, the line will be the first exchange line area, based in a Florida state university.

A bill, allocating $3000 for the line was pending before the senate at the beginning of this week, and Hunter Potts, SG vice-president.

Charges would be $7.10 per month for the single phone to be located in the Village Center, confirmed Potts.

However, the College of Engineering, President Lee Constantine, the line will be the first exchange line area, based in a Florida state university.

A bill, allocating $3000 for the line was pending before the senate at the beginning of this week, and Hunter Potts, SG vice-president.

"Boy, orientation isn't the most exciting experience!!!"

The line would be experimented for the months March-June. "Hopefully, if it works out to be a popular thing," said Potts, "it would be added to next year's budget."

"We have been averse to the need for an ongoing development program for some time," Simmons said. "It is fortunate to have this opportunity to facilitate such a program, and the resulting exchange of information between supervisors should prove beneficial to all participants. Through this program all areas of the campus will necessarily become involved and university management will gain more opportunity to develop day-to-day tools of effective leadership."

"Problems won't get solved without an open exchange of ideas," Simmons stated. "This is very significant for the university in that some will be affected. We now have the ways and means to reach all employees."

The high rate of non-faculty employee turnover within the university prompts the need and urgency for this program, according to Simmons. With effective training and supervision, he said, the problems will hopefully be solved.

Student complaints led Ferrell to discuss with the Orientation and Recruitment Committee, and the implementation of a program similar to that used in the summer of 1973. That program had outstanding success as measured by evaluation forms completed by participating students.

The students were invited to the campus in August for a two-day visit. Emphasis was placed on the "individual" during the extensive orientation program, Ferrell said.

A personal and friendly atmosphere was produced, he added, resulting in praise from the participating students.

Participants were guided around the campus, introduced to other students, and were offered recreation during the evening. Campus procedures were explained to participants.

Throughout the entire stay, students were separated into smaller groups for a more personal effort.

Ferrell called this the first of a four phase program, designed to help the student be better prepared for life when schooling is completed.

An accredited one-hour course, second phase of the plan, is proposed for all incoming freshmen to help them become aware of procedures needed to solve problems on and off campus. The course will expose what services are available through the school and how one may become involved with activities involving special interests.

The third phase of development comprises the year a student spends on campus at a college or university. This stage is marked by exposure to college problems that arise, resulting in learning to handle these situations properly.

The final phase involves life planning and career choice. In this phase each student must choose his career and begin to plan his life with realistic goals, Ferrell said.

Ferrell commented on the two remaining problem areas, orientation and academic advisement. Though no formal plans have been adopted to alleviate advisement. Though no formal plans have been adopted to alleviate these problems, the committee is working for solutions. Ferrell is hopeful that solutions will be found and implemented for the fall quarter of 1974.

There have been no suggestions for a new type of orientation, registering and advising program for students entering during the winter or spring quarters, but Ferrell and the committee hope to find a suitable solution.

Ferrell explained that extra Curricular Activity Day (ECA), held in fall quarter, 1973 was given priority thereby resulting in delays in implementing the new system.

Ferrell explained the committee's "peninsou concern" by saying, "The students are dehumanized by the present system and are not treated as individuals would like to be treated."
"Out of Order." A common occurrence recently with library copiers and the cause of many student complaints. Bids for machines to replace the four AB Dick copiers presently in use will be accepted soon. (Photo by Alan Creadin)

**FTU In Danger Of Losing SUS Monies**

By Alan Crouse

Although FTU and three other state universities are in danger of losing State University System (SUS) funds as a result of under-realizing projected enrollments (according to President of the University of South Florida (USF) Cecil Mackey), FTU officials contend this university may get increased accuracy of stories published in the university may get increased.

SUSFTU President of USF's "Oracle" would be cut. Business Affairs John of many recent with library copiers and the cause of many student complaints. Bids for the four AB Dick copiers presently in use will be accepted soon.

Visitation Lengthened, BOE Vote Unanimous

By Mike Myers

The Florida Board of Education (BOE) unanimously approved a proposal to extend daily visitation hours at its Tuesday meeting.

The new policy will allow for visitation between members of opposite sexes from 2 p.m. to midnight on weekdays and 2 p.m. to 2 a.m. on weekends. This extends the old restrictions by one hour on weekday evenings and two hours on weekend evenings.

The approval of the BOE, which consists of the governor and his cabinet, means the new hours are now the official policy of the State University System. They must be adopted by each individual institution, but this is generally an automatic procedure, according to Student Government President, Lee Constantine.

G. Smith Jr., Assistant Director of Enrollment Services, explained that enrollment figures are used in planning state university budgets. According to Smith, the budget is based on enrollment figures averaged from three or four years quarters. This three

average is computed during the spring quarter and is the basis for the projected enrollment figures for the next fiscal year which begins in July.

When a projected enrollment figure is computed, it is submitted to the SUS along with the proposed budget, Smith said. He said the SUS does not deal strictly with any formulas.

According to Smith, if a university comes reasonably close to its projected figures, or

if estimating circumstances arise after a projection was made, as in the energy crisis, the SUS would probably approve the previous budget.

Smith explained some of the apparent discrepancies in FTU's figures by naming the different categories of students (full-time, part-time off-campus, on-campus, etc.) and saying that some offices could be responsible for certain categories of figures.

Inflation Hits! Beer Prices Up

The cost of beer in the snack bar has increased a nickel due to a hike in wholesale cost from the distributor.

John Williams, director of Administrative Services, said "the cost of beer increased to us, so we had to raise our prices."

The recent price increase from 35 to 40 cents a glass, and Budweiser from 30 to 35 cents a glass. In an effort to maintain beer at a lower cost, the snack bar now offers fountain for 10 cents a glass.

In an ABC Lounges the only beer available at 50 cents is their own brand, while most American beers sell for 50 cents with imported beers at 80 cents.

**T-Bowl Expansion Not Feasible**

The construction of a stadium in the Orlando area, or an expansion of the existing Tangerine Bowl is not economically feasible according to a study by FTU graduate student Bob Hazelwood.

In his study on feasibility, Hazelwood attempted "to give an investor insight into the economic feasibility and some of the problems associated with a stadium development project," he stated.

The project, as it currently stands, would receive a $200,000 per year subsidy from Orange County, but met with a recent setback when bond financiers told development officials they could not buy $4.2 million in expansion bonds unless new bids are solicited.

Hazelwood said he feels there has been a disregard for the will of the people, and that the issue of the Orlando's stadium development has consequently become the government's.

"There is a need for a stadium in the county, but it must fit the needs in the county, not the futuristic aspirations of some people," Hazelwood pointed out.

Orlando's central location, tropical climate and booming economy would make a stadium feasible and practical, Hazelwood maintains.

**Copy Machines To Be Replaced**

Acting Director of Printing and Reproduction Services Les Gross said that bids for three or four plain bond copy machines to replace those in the library will be accepted beginning Feb. 20, according to Les Gross, acting director of Printing and Reproduction Services.

Gross said he has not received any student complaints concerning problems with the present copy machines in the library, but the quality of newer models has improved to the extent that replacements for library copy machines have become desirable.

Bernard Fox, assistant director of the Library, said he receives daily complaints about the quality reproductions the machines produce and the fact that they are often out of order. According to the

Duplication Office in the Administration Building, refunds are impossible for malfunctioning copy machines.

All bids for new machines will be evaluated and the best bid will be considered for a contract. If the bidding is closed, there would be an approximate 30 to 60 day period before new machines would be operational. Gross emphasized that all charges must be approved by the purchasing division of the state.

FTU obtains new duplicating machines, Gross said he could not predict whether there would be any price change, but said he would attempt to keep the price at 5 cents per copy.

The recent price increase from 35 to 40 cents a glass, and Budweiser from 30 to 35 cents a glass. In an effort to maintain beer at a lower cost, the snack bar now offers fountain for 10 cents a glass.

Papers

By Mike Hall

Have you fallen into a dull, everyday cafeteria lunchtime routine? If so, take heart! I have devised a keen competitive game for you to play.

Players

Players for this game are those of you who are business residents and non-business students. The game is divided into four categories: resident Greeks, resident non-Greeks, non-resident Greeks, and non-resident non-Greeks.

The game begins with a form that must be filled out by each participant. The form asks for the name of the player, their student ID number, and their expected major.

The next step is to determine the winner. The winner is the player who has the highest GPA at the end of the quarter. The GPA is calculated by averaging the grades from all courses taken during the quarter.

Rules

Players may challenge the results of the game by presenting evidence to the cafeteria staff. If the evidence is found to be valid, the player will receive a free lunch, and the staff member who made the incorrect calculation will be reprimanded.

Conclusion

If you want to have fun while learning, then you should try this game. It will be sure to add a little excitement to your daily routine.

Editor, The Future
Twelve of FTU's 2,316 cords have participated in a woman's self-defense course offered during the last two weeks, as a result of a recent attack on a woman resident.

According to Andy Taylor, a Resident Advisor (RA) who is coordinating the course, women did not attend because they thought it was a waste of time. "They didn't feel that anything like an attack would happen to them," said Taylor. "It's always the other guy..."

Ken V. Murphy, Resident Housing Association member who is assisting Taylor in the course presentation, said women do not know how good the course is.

"I don't think they realize the possibility of their being attacked," added Murphy.

Even if women do not need to use skills learned in the self-defense course, said Murphy, "it is good for them to have that knowledge.

Basic skills taught in the course include karate, self-defense, and defense. Those who attended believed "that there is no such thing as being safe". According to Taylor, an attacker is out to hurt you, and "to prevent that you must hurt him-and get away."

Pens and their contents are very good weapons, according to Murphy.

Rally Arranged For Basketball

A pep rally will be held tomorrow at Lake Claire, sponsored by the Interfraternity Council (IFC). The rally is planned as a preliminary to the FTU-FIT basketball game scheduled for South Melbourne Saturday evening.

For fraternity members, the rally will be led by the FTU cheerleaders, and free beer will be served. Mike Mustard, president of IFC, said he hopes there will be a big turnout because the event is planned "to promote spirit from the entire student body."

The rally is scheduled from 5:30 to 7 p.m., and should be over in time for students to catch any of three basketball games being played at the Village Center at 6 p.m. To ride a bus to Melbourne, students must sign up in the Student Government Office in the VC.

Greyline Bus Canceled, New Line Sought

By Alan Crouse

The Greyline Bus Company, which has served the FTU campus for five years, has discontinued its service.

According to Ethel Delak, a junior finance student who has ridden the bus for two quarters, a sign was posted in the bus on Friday, Jan. 18, stating that it was the last run. Delak said the number of FTU students on the morning run ranged from 3 to 10.

The bus, serving Goodwill Industries' employees as well as FTU students, arrived on campus via Colonial Drive at 9 a.m. and 5 p.m. "We (the and her fellow passengers) heard rumors last quarter that the service was going to end soon," said Delak. "We even debated some means of promoting the use of the bus, but were afraid the service would end regardless, making new passengers angry at us."

Greyline officials cited lack of participation as the reason for canceling the run. Bonnie Topel, an accountant for Greyline, said considering such factors as drivers' buses and insurance, losses opened at an expense of 81 cents a mile. If ten students and ten Goodwill Industries' employees rode the bus traveling twelve miles from downtown Orlando campus, the bus company's costs would be $9.72. At 35 cents per person, the fare would total $7, yielding a $2.72 loss for traveling one way to campus. Since few, if any, passengers rode the bus on the early run, or to campus on the late run, the losses were actually greater.

John P. Goree, vice president of business affairs, explained how bus service was originally obtained. When the university was preparing to open its doors in 1968, Goree said he and C. B. Engert, director of public relations, contacted Greyline.

Goree said that despite discussions, the service never caught on with students and staff. The 1 p.m. run from the Ponceau area to campus was often empty both among graduating and departmental students. Dr. Ann Rudolf, a senior microbiology student, used to drive the Ponceau area to catch the bus at Colonial Plaza, "I like saving mileage on her car," said Rudolf. "I felt much more relaxed because I didn't have to put up with the traffic."

Ellen C. Cramer, instructor in art, explained why Greyline was as reliable as a bus, said Ethel Delak. Every time the driver was a "flirtatious object of the present basis."

Figures compiled by Schrader showed that a bus making a run in the spring, summer and fall would have a profit of approximately $2,000 at 100 percent capacity, or break even at 75 percent capacity. The reason for concentrating on the Winter Park-Maitland area is that it has the most FTU people in the closest proximity, according to a map drawn up by the engineering department which plots students, faculty and the bus off campus.

Working with Schrader on the project is James K. Eller, Coordinator of the Energy Conservation Program, said the route was tentative, but that shopping centers will be the main stops to enable passengers to drive to the bus stops and have time to park their cars. Eller said 50 cents would be the limit for a one-way trip or the fare would be discouraging to potential passengers. He also mentioned the possibility of offering discount cards on the bus via headphoners.

Schrader said this would be a successful one if the bus service was secured, and that the courses would have to be limited to such subjects as elementary languages and music appreciation.

Although to Schrader, J. R., Maeda Jr., of the DOT regional office in Orlando, has agreed with the plan, has no intention of forwarding it to Tallahassee. If the grant is approved, Schrader said the university would ask for an experimental period to include the spring, summer and fall quarters.

Unlike many FTU students, this group of FTU administrators and personal have formed a car pool which saves each of them 4 trips per week. They are, from left to right: Joseph Gomez, Controller; Dan Beistel, Internal Auditor; Tony Bryani, Director of Internal Control; J. P. Goree, Vice President of Business Affairs; and Linda Vail, a secretary in the College of Business. The car pool was started in November, before the energy crisis was at its worst. The five of them drive about 7 miles each way daily, and say that they all have noticed a drop in their fuel bills.

Student Senators Request Listing Majors On Degrees

"Overwhelming results" of a student poll gauging reaction to the deletion of majors from diplomas prompted a Student Senate vote last week to request that efforts be made to reinstate listing single and double majors on degrees.

Deletion of majors was originally implemented because of printer's difficulties in fitting information onto degrees, and because of time requirements the Registrar's Office faced. Director of Purchasing Les Cross forecast no price hike to the university as a result of listing majors, because he said listing would not require a contract change.

The bill will now be sent to the Council of Deans and to Leland Jackson, assistant vice president for Academic Affairs. Both the Council and Jackson have favored omission of majors in the past.

Out of a total 1,628 students responding to the poll, 1,581, or 97.1 per cent, favored listing majors.

Loving Photo Exhibition In VC Art Gallery Today

By Weber Ivy

So you happen to like color, do you? Well, you and the photographs of Bill Loving ought to get together. These prints pack a pleasing wallop of color and texture. Loving's work covers an impressive range of subjects—everything from football players to bougainvilleas. This diversity permits the photographer to portray peacefulness.

Ivy searolls. Wp.

Some of the beach, sunset and floral scenes ought to be titled, "Having a wonderful time—wish you were here."

The multiple images in Loving's self-portraits look like a simple case of the shakes. The interest value of this one escaped me. One of the more unusual was "Cultural Convergence," a Christ-figure superimposed on an Aztec or Maya relief. This would be extremely effective in a painted portrait.

Opscan Evaluates Exams

In less than six months it takes a student to finish a test, the Opscan, a professional-grade computer, can grade tests and give percentile rank numbers.

Any faculty member may use this service of the Computer Center, if he purchases the required standardized answer sheets which are available in the book store.

Exams can be graded, item-analyzed as to how difficult each question was and percentile rankings computed at the rate of approximately 300 tests per hour.

According to Tom Peoples, scientific programmer, only 10 professors currently use the computer for test grading, and those are from the departments of Physical Education and Biology and the College of Education.

Processing the tests is a relatively uncomplicated project.

Keys for the test, run through Opscan, are fed into it, and the IBM computer punchout cards for both the keys and the individual tests.

The cards are then fed into the main computer and sheets are printed showing each individual score, item analysis and percentile rankings.

According to Peoples, one illegible exam, written by a Phys. Ed major in ink (tests are supposed to be done in pencil), was unreadable almost beyond recognition with several attempted erasures.

However, the device took the test and graded it without error.

Peoples said he hopes that Opscan will be used to process faculty evaluations and other surveys done by both administrators and students.

---

Glades Excursion Proves Graphic

By Michael Lachowicz

Once the stomping grounds for Seminole Indians making their way through the Everglades in search of food, the Everglades south Florida park was made by six graphic design artists and their professor during the first week of January.

Assistant Professor of art, J. J. Chavda, and half the students from his advanced Graphic Design II class walked foot trails through the eyes of graphic design, with a selection of wildlife and compiled a written and photographic report of their excursions into the largest remaining sub-tropical wilderness in the continental United States.

"The students viewed the Everglades and its conditions through the eyes of graphic designers, with an artistic approach, as opposed to some journalistic approach," Chavda said.

The class project will be presented through several publications demonstrating to the conservation-minded people of Florida that progress is good, but careful attention should be paid to not endangering the environment.

Chavda said the Everglades were chosen for the class project because of the students' interest in conservation and their desire to study something related to Florida.

Students who made the five-day journey were graphic design majors Naron Tachchikwara, Vicki Redding, Bob Ryan, Betty Kerns, Teresa Lachowicz and Karen Harrod.

The artists found the Indians unhappy with their living conditions, according to Chavda. They do not accept the progress in their bermudas.

Living along back roads, the Indians, grouped in four and five family communities, make their living mostly by farming. Some of the young Indians venture into nearby towns for employment.

Kerns said she felt the Indians were "quite modern" with their cement block houses and compact cars, but that they still dressed in their native attire.

The four women received the privilege of photography from Indian men who refused to allow any of the three men to take pictures of them.

Harrod supposed either the Indians did not trust the men with cameras or just wanted a chance to talk to the young women.

Squatters welcomed the artists into the Everglades' past with stories of pre-tourist days.

An aged man and his wife, dressed in patched overalls, told of helping construct the Tamiami Trail, the highway from Tampa to Miami cutting through the heart of the Everglades.

Kerns described the squatters' living quarters as "shacks, school buses and trailer houses."

Holding on the hood of one of the three cars around 17-mile Loop Road, Kerns was surprised to find so many clumps of trees in the marsh. She and Redding both expected to find more swamp and grasslands.

Redding commented that this geographic region was probably the only place in Florida where one can look for "miles and miles without seeing a telephone pole."

Civilization was in evidence, however, with discarded beer cans. Harrod was astonished by the amount of litter left out in the "bohiois" left by persons passing through.

Before leaving for the trip, Lachowicz researched the various kinds of wildlife to be found in the glades. The Everglades were teeming with animals for the class project was designed to expose coots, anhingas, alligators, turtles and fish swimming in the five-foot deep water.

Lachowicz reported that the animals almost seemed to line up for their photographs to be taken along the sloughs where the water collects during winter, the dry season.

The airboat tourist attractions are still tearing up the grassland with their tracks, but Chavda said the tourist business was slack during their January visit.

Vegetation in the national park has also been affected by man's trademark of progress, the highway.

Splitting the glades, the roads divide the flow of water from one side to the other. This has caused vegetation on the side
drilled by the water flow to dry out and lose color.

Lachowicz observed that the Everglades were slowly drying up from drainage by farmers and the dikes built in the northern section of the glades by the U.S. Army Corps of Engineers.

Bob Ryan, a pilot from Miami, has flown over the glades many times and noticed little change in the national park from construction.

He said the government understands the balance of nature among the wildlife, and knows if one portion of the animal scheme is upset it seems to.

EVERGLADES IMAGES

Editor's Note: Jagdish Chande and six students from his Advanced Graphic Design II course set out Jan. 4 for a five-day excursion through the Everglades. The following is their review of the trip.

Why would our graphic design class go to the Everglades? To wrestle alligators? No. To practice bird-calls? Wrong. To get out of the first week of classes winter quarter? Well, maybe. Actually this trip was a research venture to collect information, photographs and drawings for several publications we will design the remainder of the quarter. This project is a simulation of what we, as graphic designers, may encounter in our future occupations.

Our first stop was the northern edge of Lake Okeechobee, the origin of the 70-mile-wide river known as the Everglades. A few miles around the lake we stopped at the Brighton Indian Reservation to photograph and talk with some modern Seminole Indians.

After a night in Homestead, we proceeded to Everglades National Park where we photographed wildlife, scenic flora and breathtaking landscapes along numerous trails.

The third day we drove west on Tamiami Trail passing many tourist traps featuring airboat rides, tropical zoos and Indian crafts.

The next day was spent in exploring the semi-deserted southern resort, Everglades City. An afternoon side-trip to Collier-Seminole State Park was of great historical interest to us. The ominous monster machine that dug the Tamiami Trail was laid to rest as a monument to that significant highway. The remainder of the day was spent in leisurely relaxation before our long drive back to civilization the following morning.

By Michael Lochridge

Student Government Atty. Gen. Tom Page, whose month-long counseling service for students was cut short in early January for possible violation of the Florida Bar Association code, resigned Aug. 19 after Executive Assistant Gabriel Yanni has been appointed to replace Page.

Page said he resigned for personal reasons, not because of the discontinuance of the service.

In a letter to FTU Legal Counsel John Mahaffey, the Bar Association cited the student service for possible violation of the Florida Bar Association’s code of professional responsibility.

Learning of the Bar Association’s action, Page immediately discontinued the counseling service.

SG President Lee Constantine appointed Yanni within a week of Page’s resignation. Yanni served as Attorney general last winter and spring quarters.

Page gave his 20-hour class schedule and 15 office hours in the SL post as reasons for his resignation, indicating he needed more time to study.

He also expressed dissatisfaction with his job as attorney general from the time he was appointed by Constantine during fall quarter.

“I got into something I didn’t like,” Page said. “I wasn’t getting paid for the 15 office hours, and I needed the time to study and work to make money.”

Constantine said Page was not putting in the amount of time and work needed for the position and he and Page agreed on the resignation.

The counseling service was instituted by Page in late November to provide free legal assistance to students by referring them to an attorney or by the former attorney general himself consulting with a lawyer and relaying the legal information to the student.

The student service, publicized December 7 in the Future, received quick response from two sources—three students requesting legal advice and a letter from the Bar Association stating the service was possibly violating the Bar Association’s code by not obtaining the Association’s approval.

FTU Legal Counsel John Mahaffey received the letter from the Bar Association which he forwarded to Vice President for Student Affairs W. “Rex” Brown.

Brown then informed Page of the Bar Association’s action and Page discontinued the service.

Page said he was not aware that approval from the Bar Association was needed to establish a counseling service.

The senior accounting major who is planning to attend law school upon graduation, said, “I wouldn’t do something illegal when I’m trying to enter law school.”

Three persons contacted Page before he discontinued the service. Page said he referred all three to an Orlando attorney.

Page said approval for the service must be obtained from the Bar Association before the counseling service can be re-opened.

“Page said the service would be worthwhile only if funds from the SG budget could be appropriated to pay a lawyer for handling student cases.

“One way we could offer a good counseling service,” Page added.

Brown said that due to the lack of response to the service, he saw no reason to pursue the matter and Constantine said the service will not be restarted immediately.

While in office, Page worked with Constantine and Dean of Men Paul McQuillan on the revision of the university judicial system. First reading on the system will occur at the next SK Senate meeting, Yanni said Tuesday.

Yanni, who also serves as appointed executive assistant to the president at the beginning of winter quarter. He holds a political science degree and is now working on a journalism degree.

Panhellenic Workshop Promotes Enthusiasm

A recent Panhellenic Workshop resulted in the formation of two committees to implement a smoother sorority rush for the 1974-75 academic year.

These committees will compile a booklet explaining rush and will hold a Panhellenic Coffee explaining the Greek system to potential rushers.

Held, Feb. 2, the workshop provided an ‘informal’ atmosphere for discussion and interaction among representatives of the four campus sororities, according to Pan Browning, assistant for student development.

The main purpose of the workshop was to promote enthusiasm for rush and publicize recruiting efforts.

Members of Alpha Chi Omega, Zeta Tau Alpha, Tri Delta and Tri Psi discussed the possibilities of a summer rush involving high school students and recruiting them to FTU.

Personal letter writing to incoming freshman women from the sororities is also under consideration.

“We’re hoping that by going out and talking to high school students, we will get them interested in FTU, and then possibly the Greek system,” said Browning.

The next workshop is scheduled for April 27. Browning said more specific details for rush will be discussed then.

commissioner of elections, has been working on a new election statute which would revise the election of SG officers.

Working towards his second BA degree from FTU, Yanni was publicized December 7 in the Future, received quick response from two sources—three students.

Jaycees Award Bolemon

Dr. Jay Bolemon, associate professor of physics at FTU, recently received the 1973-74 Outstanding Young Educator Award from the Winter Park Jaycees at their annual Awards Banquet at the Imperial House Thurs. noon-1 p.m.

This award is given annually to the outstanding educator in Winter Park. Dr. Jack Noon, who also attended the awards presentation.

Bolemon, who is in his fifth year at this university, is the second FTU professor this year to win an award of this type. Dr. Chris Clouse of the chemistry department received a similar award from the Orlando Jaycees Jan. 19.

Pat Tornillo of the Florida Public Employees Council told the committee that attempts to limit the scope of bargaining were "artificial" and said, "I believe it ought to be open to the employees on what they'll bargain for."

A State Supreme Court commission should complete a preliminary draft on bargaining guidelines within a few weeks, according to Ken Magill, Florida chairman of the American Federation of Teachers.

To obtain objective information on collective bargaining at the national level, the University of Florida faculty senate has voted to form a seven-member committee, according to an article in the Feb. 1 issue of the "Gainesville Sun."

These bills have been presented for action since the beginning of the winter quarter.

6-14 - To transfer $2000 from the Unallocated Reserve Account to the ROTC fund in order to permit senators to attend Board of Regents meetings. Action - postponed indefinitely.

6-15 - Favoring designation of majors upon student degrees, as passed.

6-16 - Change in withdrawal policy: 1. Students who do not need the approval of their faculty advisor to withdraw from a class.

2. Students may withdraw from any class up to the beginning of the last week of classes for the quarter.

3. If a student withdrawing from a class shall receive a grade of "W" whether passing or "F" whether failing, which will not averaged into the student's GPA.

4. A student may not change from one final week audit after the fifth week of the quarter unless the student is passing the course to be changed at the student has the consent of his instructor.

5. These policies apply to full as well as part time students and are effective whether the student withdraws from the course or the quarter.

Action - referred to committee.

6-17 - To allow beer consumption in the Cafeteria during normal operating hours. Also to permit beer consumption in the Cafeteria, Multi-Purpose Room, and President's Dining Room during the first reading. 6-24

Scholarships Awarded by the ROTC Program

Three more cadets from FTU's Air Force ROTC division have received two-year scholarships which are retroactive to the first of winter quarter.

Hugh Gordon, Stan Transfelski and Earl Taylor, all junior at FTU, were the recipients. The scholarships will cover the cost of tuition and books. Twenty-eight per cent of the seventy-eight scholarships awarded by the ROTC program have been received by students.

Chancellor's office. From there it is sent to every university in the state for review. The review is conducted by a group of professors, and the dean makes his recommendations and passes them on to President Millican.

If the plan has received approval, the next step is to send the degree from the Board of Regents through the Vice Chancellor for Academic Affairs. The Vice Chancellor will approve the plan if it is sent to him. The approval comes to the Chancellor's office. If it is accepted, the program could be implemented.

BOR approval is not automatic. Dean Ellis related the instance of the Ph.D. in computer science which FTU applied for permission to plan last year. Because of a lack of statistical evidence indicating a need for this program, it was turned down. The new program could be made.

In light of the new master's degrees in various stages of planning with implementation as early as Fall 1974, it includes master's degrees in industrial chemistry, art, history, and social sciences, and bachelor's degrees in radiologic science, forensic science and public administration. New degree programs generally originate on the departmental level, Ellis explained. They are either approved or rejected by the dean of the college involved. Dean Ellis' office then reviews the proposals and passes them on to C. B. Gambill, vice president for academic affairs, who makes his recommendations and passes them on to President Millican.

If the plan has received approval from the BOR, the university requests permission to plan the degree from the Board of Regents through the Vice Chancellor for Academic Affairs. The Vice Chancellor will approve the plan if it is sent to him. The approval comes to the Chancellor's office. If it is accepted, the program could be implemented.

According to Dean Ellis, if the authorization to plan is granted, the university compiles a master plan for the degree and contacts a number of prospective students to determine response, studies of manpower and physical space needed, course requirements, resources in the library and related data.

This plan follows the same route as the preliminary proposal until it reaches the Chancellor's office. From there it is sent to every university in the state system, which reviews it and return it to the Chancellor who makes a recommendation to the Board of Regents based on these reviews. If the BOR grants permission, the program can be implemented.

Many of these students are the large number of other degree programs planned, Dean Ellis indicated that the reason for the initiation of these new programs was that FTU is a young, rapidly expanding university. He said that in the future the number of new programs started each year would taper down.

Cadet Lts. Hugh Gordon, Stanley Transfelski and Earl Taylor (left to right) receive congratulations from Maj. Bennette Whisenant, Professor of Aerospace Studies. (Photo by Chuck Seifert).

The performance is scheduled for 8:30 p.m. in the Engineering Auditorium.
**FTU Wrestlers Host State Championships**

By Fred Cay

Scotty Sherman, Pat Murphy and his team are aiming for another FTU wrestling title, but the FTU wrestlers thought to have the best chances in the Florida Collegiate State Championships tonight and tomorrow at the Orlando Naval Training Center. However, one that isn’t too likely to participate at all may hold the key to FTU’s chances of winning the coveted overall championship.

Mike Shivers, potentially one of the top in the Southland, aggravated a pull hip muscle in Monday’s exhibition against his Venezuelan Olympic foe and it is doubtful if he’ll be able to perform at all. If he can, it will be at the unfamiliar 158-pound position instead of his usual 142 or 160 pounds. Another starter, freshman Tim Finneran (177 pounds) is definitely out with a knee injury.

“Without Shivers and Finneran our chances of beating Florida are considerably reduced,” admitted Head Coach Gerry Gergley Tuesday while analyzing his team’s chances. “Still, even without those two we’ll be fighting for the title. It will be a lot tougher, though.”

At Florida, the team is able to beat with the Knights, University of Tampa and Miami. It is a “super tough” Duals. Florida and Miami could be the closest pursuers.

A rundown of the FTU’s chances of finishing in the top five seeds and thus being seeded at the regionals.

118—SCOTTY SHERMAN: “He has a good shot at the championship and will be seeded no. 1 or 2,” said Gergley. Sherman’s toughest resistance should be offered by Florida’s Bill Halpern. However, if Florida wins the finals two years ago when he defeated FTU’s Paul Altman, Sherman may be the “outstanding wrestler.”

125-160—PAT MURPHY: “I’m not sure if Murphy will be able to pin Nebraska at 150 pounds,” said the coach. “Still, he has dropped down a weight class and will be a lot tougher, probably be one of the biggest of the year.”

### FTU Golfer wins State Championship

By Fred Cay

The FTU golfer team, according to first-year coach Mike Stockwell, will surprise a few people this year.” With an outlook like that, the team will make a lot of noise this season.

Stockwell, who has taught golf in Miami and here in Orlando while playing all four years while attending FTU, feels the main objective of the team is to build up the program and get intercollegiates in the near future.

This year’s team will carry 10 players, according to the coach, “a strong nucleus of six players: Roger Amick, Tony Kirby, Doug Perry, John Tanner, Gary Martinet and Gus Ruiz.”

After the team’s first two victories last weekend at Flagler College and FIU's 42-8

Grapplers crush FIU

By Fred Cay

“FTU is simply our best performance of the season,” said Head Coach Gerry Gergley of his charges’ 42-8 thraashing of Florida International last Friday night.

This victory was done to the best competitive weight for the first time this year and we got some outstanding, individual efforts,” Gergley continued.

Best efforts, according to the

heavyweight, Venezuelan referee Don Garcia 5-2 in a 220-pound match of Monday’s exhibition at the VCAR. (Photo by Jim Matthews)

By Larry McGee

It's no abnormal for a college team returning from a tough road trip to refer to some opponent as being a "snake pit." But the visiting Florida A&M Rattlers stumbled with the quickness of a tournament hungry team in defeat at the hands of the Knights in Oviedo, 88-77. The natural tendency was to pass A&M off as a mediocre, sporadic run and shoot team that would fall victim to a good zone defense and patient offense like the Knights.

But the Rattlers, now 15-4 on the season, proved to be a very knowledgeable team. The team that took the fast break when the opportunity presented itself, but also a team that would work for the shot if the fast break never came. "Yes, Florida A&M was a very mature team," said FTU coach Torchy Clark. "They didn't make a lot of mistakes when they had the ball, and they played very well when they were tired in the second half of games.

The competition in this game was the Raiders, a Black Student Union (BSU) group which has beaten defending champs Florida Tech on the second night of the BSU backcourt back, Morrisey said. It was also a credit to the BSU's "Rattlesnake" student-athlete squad.

Siegfried Copette, Iyes Top Tri-Delta

Sigma Chi, the newest national fraternity on campus, did surprisingly well in its first game against an older, more established frat than had been able to do before last Friday night. Sigma Chi, who was "just a team that worked for the season, proved to be a very tough team when the opportunity arose, but did what none of the older, very mature & Students 54-49 the previous coach Torchy Clark.

"Yes, Florida A&M was a very mature team," said FTU coach Torchy Clark. "They didn't make a lot of mistakes when they had the ball, and they played very well when they were tired in the second half of games.

The competition in this game was the Raiders, a Black Student Union (BSU) group which has beaten defending champs Florida Tech on the second night of the BSU backcourt back, Morrisey said. It was also a credit to the BSU's "Rattlesnake" student-athlete squad.

Angelo Callins added 14 points, also.

Last Tuesday night, FTU went on the road to play Central Florida, a stronger team with a zone defense and patient offense that also a team that would work for the season, proved to be a very tough team when the opportunity arose, but did what none of the older, very mature & Students 54-49 the previous coach Torchy Clark.

Brown, Washington and Steele all had 12 while Poppa, Kemey and Page, Kenny Luser and Phil Merrick. In attendance, in the Raiders, though, it must be pointed out that they played the first three minutes of the 25-minute contest with only four players. When two more players arrived, Sigma Chi's 9-2 lead was quickly turned into a 1-17, favorable of the FTU team.

Emot Petrie's terrorist shooting (15:62), with the first three quarters and the Raiders generally went down against the competition. Sigma Chi, SIx took the lead for good when Akers hit a driving lay up with 3:05 to go.

Florida Tech had 10 in a 2.5 margin but several late steals made it a closer three-point deficit after FTU's final three.

Lester and Guy Linder combined for 15 first-half points and wound up with nine and seven apiece. For the Rattlers, Payne, tallied 16, Herb Harwood, 8, Harwood, 11 and Ray Thomas 10.

Weightlifting: Vie in State Tourney

After winning first place in the Florida Open Weightlifting Championships at FTU two weeks ago, Florida Tech's little brothers have been watching over Humberto Salazar 4-3 after 180.5 kg. to battle with the Nicaraguan and the Florida AAU 6-5 earlier in the year, FIT's 6-5 with the soap. For those who saw last year's game, well, that game went to Florida Tech. The meet, hosted by Florida, will be played at an unfamiliar gym, Winter Park, Fla. and will take place on February 8, 1974.

"Instead of going to the referees, many on-the-mat moves that have been working this week to prepare for these games," said Miss Higginbotham, "and there's been a margin of improvement.''

FTU's next home game will be against Rollins at Rollins next Thursday. The 7:30 p.m. game will be as preliminary to a Rollins varsity game. If money from Student Government is allowed, FTU hopes to continue its plans with a celebrity game, slated for Feb. 27 and 28, Thursday. The 7:30 p.m. game will be as preliminary to a Rollins varsity game. If money from Student Government is allowed, FTU hopes to continue its plans with a celebrity game, slated for Feb. 27 and 28.
Knights’ Sparkplug—That’s Angelo Callins

By Joe DeSalvo

Angelo Callins has come a long way since his first game in an FTU uniform. Last year, the 6-0 guard was the Knight’s sixth man with Mike Clark in the backcourt with Arnett Hall. This year with Clark graduated, Callins has started every game at guard and has done the job thus far.

Callins has played guard his whole basketball career. Before coming to FTU last year, Callins played at Pensacola High School, which is his hometown. Then it was down to St. Joseph Junior College at Stuart for two years.

Coach Torchy Clark has been pleased with Callins’ ball-handling and quickness. Callins and Hall have teamed up many times this year breaking close games with their fast breaks leading to easy buckets.

Callins said the difference between last year’s team and this year’s is that “we’re a larger team and a more aggressive team. We have teamwork and nobody’s selfish.”

Callins loves playing in the backcourt with Hall. Callins said, “We complement each other—he’s the shooter and I’m the quarterback.” The well-liked senior loves the responsibility of quarterbacking the team; it’s been his job throughout his career.

With the Knights losing seniors Bob Jones, John Smith, Hall and himself after this year, Callins said that next year’s team will depend on experienced junior college players working with the young bench the Knights have now.

When asked what was his best game while at FTU, the physical education major thought it over closely and chose the Memphis St. game was the 9,000 fans giving the game a “real pro atmosphere,” according to Callins.

Callins said that next year’s team will not forget, that’s Coach Clark. Callins said, “I appreciate Clark’s system, it takes time to learn that’s he’s a great coach. He comes up with clutch plays at the right times. He’s also come up with some potentially good talent.”

With the school not having a gym on campus as of yet, Callins said, “The team has done an excellent job considering the facilities. (The Knights play afternoon of the game, a good steak dinner, and then think about the game, “get mentally ready.”

Angelo Callins will never forget the FTU basketball program. “It’s been an asset to my basketball career,” said Callins, “I’ve learned a lot about the players I’ve worked with and the great players that FTU has played against.”

If there’s one man Callins will not forget, that’s Coach Clark. Callins said, “I appreciate Clark’s system, it takes time to learn that’s he’s a great coach. He comes up with clutch plays at the right times. He’s also come up with some potentially good talent.”

The FTU fans at the Rollins-FTU confrontation at the Rollins fieldhouse, gave Callins “the greatest feeling.” “The crowd’s cheering,” according to Callins, “was fantastic and it definitely helped boost the team’s morale.”

After graduation in June, Angelo Callins hopes to continue his basketball career. His “ultimate goal” is to play professional ball for five to six years and then travel before setting down.

Callins hopes to play in either pro league in the United States or go to Europe to play ball. He feels lack of publicity and his height will be the major obstacles in being drafted by the NBA or ABA.

If he can’t play pro ball, Callins would like to play semi-pro ball or get into the education system by working himself up in coaching.

Ask Angelo Callins what will be the first sight he’ll go see when the team goes to New York City next month for three games, and his answer is Madison Square Garden—home of the Knicks and Walt Frazier.

Callins said, “I would love to see Walt Frazier. He’s the number one guard on my list. I would like to take his smooth shooting and overall basketball sense and work on my smooth shooting and overall basketball sense here at FTU.”

Angelo Callins has already begun to work on his smooth shooting and basketball sense here at FTU.
